

Errata ISO 20022

Trade Services Management Messages

A discrepancy was spotted in the documentation and schemas of the Trade Services Management messages published on 15 May 2008 compared to what had been approved by the UNIFI Trade Services SEG. This discrepancy has been removed as indicated in the Errata. The purpose of this document is to help those who have used the documentation published on 15 May 2008 to easily identify what has been changed.

Details

In the DeltaReport message definition (tsmt.015.001.03.xsd), in the block ComparisonResult2, the last three elements (Addtn, Rplcmnt, Deltn) should be subject to a choice and are not in the originally published schemas and documentation.

The published schema and message definition report are updated to reflect this change.

Relevant piece of current schema:

```
<xs:complexType name="ComparisonResult2">
  <xs:sequence>
    <xs:element name="ElmtSeqNb" type="Number" />
    <xs:element name="ElmtPth" type="Max350Text" />
    <xs:element name="ElmtNm" type="Max35Text" />
    <xs:element name="Addtn" type="Addition2" />
    <xs:element name="Rplcmnt" type="Replacement2" />
    <xs:element name="Deltn" type="Deletion2" />
  </xs:sequence>
</xs:complexType>
```

Corrected schema:

```
<xs:complexType name="ComparisonResult2">
  <xs:sequence>
    <xs:element name="ElmtSeqNb" type="Number" />
    <xs:element name="ElmtPth" type="Max350Text" />
    <xs:element name="ElmtNm" type="Max35Text" />
    <xs:choice>
      <xs:element name="Addtn" type="Addition2" />
      <xs:element name="Rplcmnt" type="Replacement2" />
      <xs:element name="Deltn" type="Deletion2" />
    </xs:choice>
  </xs:sequence>
</xs:complexType>
```
