## 2 **acmt.001.001.08** **AccountOpeningInstructionV08**

### 2.1 **MessageDefinition Functionality**

#### Scope

The AccountOpeningInstruction message is sent by an account owner, for example, an investor or its designated agent to the account servicer, for example, a registrar, transfer agent, custodian or securities depository, to instruct the opening of an account or the opening of an account and the establishment of an investment plan.

#### Usage

The AccountOpeningInstruction is used to open an account directly or indirectly with the account servicer or an intermediary.

In some markets, for example, Australia, and for some products in the United Kingdom, a first order (also known as a deposit instruction) is placed at the same time as the account opening. To cater for this scenario, an order message can be linked (via references in the message) to the AccountOpeningInstruction message when needed.

Execution of the AccountOpeningInstruction is confirmed via an AccountDetailsConfirmation message.

## **FundEstimatedCashForecastReportV04**

### 7.1 **MessageDefinition Functionality**

#### Scope

A report provider, such as a transfer agent, sends the FundEstimatedCashForecastReport message to the report user, such as an investment manager or pricing agent, to report the estimated cash incomings and outgoings of one or more share classes of an investment fund on one or more trade dates.

The cash movements may result from, for example, redemption, subscription, switch transactions or reinvestment of dividends.

#### Usage

The FundEstimatedCashForecastReport is used to report estimated cash movements, that is, it is sent prior to the cut-off time and/or the price valuation of the fund.

The message contains incoming and outgoing cash flows that are estimated, that is, the price has not been applied. If the price is definitive, then the FundConfirmedCashForecastReport message must be used.

The message structure allows for the following uses:

- to provide cash in and cash out amounts for a fund/sub fund (FundOrSubFundDetails sequence is used),
- to provide cash in and cash out amounts for a fund/sub fund and one or more share classes (a FundOrSubFundDetails sequence and one or more EstimatedFundCashForecastDetails sequences are used),
- to provide cash in and cash out amounts for one or more share classes (one or more EstimatedFundCashForecastDetails sequences are used).
- to provide cash in and cash out amounts for more than one fund/sub fund, and more than one share classes (two or more FundOrSubFundDetails sequences and two or more EstimatedFundCashForecastDetails sequences and used); however, it should be noted that, in this usage, there is no way to determine which share class belongs to which fund/sub fund from the message content itself, which may not be desirable and the use of this kind of combination should be bilaterally agreed.

This message allows the report provider to report estimated cash movements in or out of a fund, but does not allow the Sender to categorise these movements, for example by country, or to give details of the underlying orders, commission or charges. If the report provider wishes to give detailed information related to estimated cash movements, then the FundDetailedEstimatedCashForecastReport message must be used.

## **FundDetailedEstimatedCashForecastReportV04**

### 9.1 **MessageDefinition Functionality**

#### Scope

A report provider, such as a transfer agent, sends the FundDetailedEstimatedCashForecastReport message to the report user, such as an investment manager or pricing agent, to report the estimated cash incomings and outgoings, sorted by country, institution name or other criteria defined by the user of one or more share classes of an investment fund on one or more trade dates.

The cash movements may result from, for example, redemption, subscription, switch transactions or reinvestment of dividends.

#### Usage

The FundDetailedEstimatedCashForecastReport is used to provide estimated cash movements, that is, it is sent prior to the cut-off time and/or the price valuation of the fund. The message contains incoming and outgoing cash flows that are estimated, that is, the price has not been applied. If the price is definitive, then the FundDetailedConfirmedCashForecastReport message must be used.

The message structure allows for the following uses:

- to provide cash in and cash out amounts for a fund/sub fund and one or more share classes (a FundOrSubFundDetails sequence and one or more EstimatedFundCashForecastDetails sequences are used),
- to provide cash in and cash out amounts for one or more share classes (one or more EstimatedFundCashForecastDetails sequences are used).

If the report is to provide estimated cash in and cash out for a fund/sub fund only and not for one or more share classes, then the FundEstimatedCashForecastReport message must be used.

The FundDetailedEstimatedCashForecastReport message is used to report cash movements in or out of a fund, organised by party, such as fund management company, country, currency or by some other criteria defined by the report provider. If the report is used to give the cash-in and cash-out for a party, then additional criteria, such as currency and country, can be specified.

In addition, the underlying transaction type for the cash-in or cash-out movement can be specified, as well as information about the cash movement's underlying orders, such as commission and charges.

#### Outline

The FundDetailedEstimatedCashForecastReportV04 MessageDefinition is composed of 9 MessageBuildingBlocks:

- A. MessageIdentification  
Identifies the message.
- B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

G. EstimatedFundCashForecastDetails

The information provided is sorted by pre-defined criteria such as country, institution, currency or user defined criteria.

H. ConsolidatedNetCashForecast

Estimated net cash as a result of the cash-in and cash-out flows specified in the fund cash forecast details.

I. Extension

Additional information that can not be captured in the structured fields and/or any other specific block.

# 10 camt.043.001.04 FundDetailedConfirmedCashForecastReport V04

## 10.1 MessageDefinition Functionality

### Scope

A report provider, such as a transfer agent, sends the FundDetailedConfirmedCashForecastReport message to the report user, such as an investment manager or pricing agent, to report the confirmed cash incomings and outgoings, sorted by country, institution name or other criteria defined by the user of one or more share classes of an investment fund on one or more trade dates.

The cash movements may result from, for example, redemption, subscription, switch transactions or reinvestment of dividends.

### Usage

The FundDetailedConfirmedCashForecastReport is used to provide definitive cash movements, that is, it is sent after the cut-off time and/or the price valuation of the fund.

If the price is not yet definitive, then the FundDetailedEstimatedCashForecastReport message must be used.

The message structure allows for the following uses:

- to provide cash in and cash out amounts for a fund/sub fund and one or more share classes (a FundOrSubFundDetails sequence and one or FundCashForecastDetails sequences are used),
- to provide cash in and cash out amounts for one or more share classes (one or more FundCashForecastDetails sequences are used).

If the report is to provide cash in and cash out for a fund/sub fund only and not for one or more share classes, then the FundConfirmedCashForecastReport message must be used.

The FundDetailedConfirmedCashForecastReport message is used to report cash movements in or out of a fund, organised by party, such as fund management company, country, currency or by some other criteria defined by the report provider. If the report is used to given the cash-in and cash-out for a party, then additional criteria, such as currency and country, can be specified.

In addition, the underlying transaction type for the cash-in or cash-out movement can be specified, as well as information about the cash movement's underlying orders, such as commission and charges.

## **PriceReportCancellationV04**

### 14.1    **MessageDefinition Functionality**

#### SCOPE

A report provider, for example, a transfer agent, fund accountant or market data provider, sends the PriceReportCancellation message to the report recipient, for example, a fund management company, transfer agent, market data provider, regulator or any other interested party to cancel previously sent prices.

#### USAGE

The PriceReportCancellation message is used to either:

- cancel an entire PriceReport that was previously sent (by quoting the business reference of the original price report in the PriceReportIdentification element), or,
- cancel one or more individual prices from a previously sent price report (by using the PriceDetailsToBeCancelled sequence).

Technically, it is possible to cancel all the prices individually by using the PriceDetailsToBeCancelled sequence, but this is not recommended.

The cancellation should not contain the cancellation of prices for more than one NAV date.

#### Outline

The PriceReportCancellationV04 MessageDefinition is composed of 11 MessageBuildingBlocks:

- A. MessageIdentification  
Reference that uniquely identifies a message from a business application standpoint.
- B. PoolReference  
Collective reference identifying a set of messages.
- C. PreviousReference  
Reference to a linked message that was previously sent.
- D. MessagePagination  
Pagination of the message.
- E. PriceReportIdentification  
Unique and unambiguous identifier for the price report, as assigned by the reporting party.
- F. CancellationIdentification  
Unique and unambiguous identifier for the cancellation of the previous price report, as assigned by the reporting party.
- G. CancellationReason

Reason for the cancellation.

H. ExpectedPriceCorrectionDate

Date or date and time the price will be corrected.

I. CompletePriceCancellation

Indicates whether or not all the prices of the referenced price report are cancelled.

J. CancelledPriceValuationDetails

Details of prices to be cancelled.

K. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

## **FundReferenceDataReportV07**

### 15.1    **MessageDefinition Functionality**

#### Scope

The FundReferenceDataReport message is sent by a report provider, for example, a fund promoter, fund management company, transfer agent, or market data provider to the report recipient, for example, a professional investor, investment fund distributor, market data provider, regulator or other interested party, to provide the key reference data for financial instruments to facilitate trading. The message may also include reporting data concerning product governance, such as target market data, and a breakdown of the costs and fees.

#### Usage

A FundReferenceDataReport message should be prepared for each class of unit/share (for which an individual ISIN should have been allocated), in respect of its "home" market. Each time the fund data changes, the 'product provider' must provide the data to a product user, for example, the distributors, by sending a new funds reference data report. A single message may contain more than one report. When the FundReferenceDataReport message is sent to provide updated reference data, the message overwrites the previously sent data.

The FundReferenceDataReport message may be used in various models or environments:

- in a standalone environment, for example, initiated by the Report Provider (fund promoter, fund manager and / or reference data vendors) sent on a regular frequency, or when changes are needed.
- in a request / response environment, with the InvestmentFundReportRequest, for example, initiated by report users (data vendors, professional investors, regulators or investment fund distributors) in enabling the user to control the flow and updates of information.
- in a reference data vendor environment, for example, market infrastructure and reference data providers may collate and store all fund reference data information centrally for access via database or regular distribution information. A reference data vendor may assume the role of both report provider and report user.

The FundReferenceDataReport message may be used to provide data concerning product governance, such as target market data, and a breakdown of the costs and fees in the context of MiFID II, with respect to the European MiFID Template (EMT).

## **InvestmentFundReportRequestV03**

### 16.1    **MessageDefinition Functionality**

#### Scope

The InvestmentFundReportRequest message is sent by a report user, for example, a professional investor, investment fund distributor, market data provider, regulator or other interested party to the report provider, for example, a fund promoter, fund management company, transfer agent, or market data provider to request a report.

Other appropriate parameters can also be included. It is also possible to indicate that the request is an open request, that is, there is no specific criteria for the report requested. For example, a request for a fund reference data report that is specified as "no criteria" means that the request is a request for a reference data report messages for all funds.

#### Outline

B. PreviousReference

## **SecuritiesMessageRejectionV03**

### 17.1    **MessageDefinition Functionality**

#### Scope

An account servicer, for example, a registrar, transfer agent or custodian bank, sends the SecuritiesMessageRejection message to the account owner, for example, an investor or its authorised agent, to reject a previously received message on which action cannot be taken.

The message may also be sent by an executing party, for example, transfer agent to the instructing party, for example, investment manager or its authorised representative to reject a previously received message on which action cannot be taken.

#### Usage

The SecuritiesMessageRejection message is used for the following reasons:

- the executing party does not recognise the linked reference, so the executing party cannot process the message
- the instructing party should not have sent the message.

Reasons that a receiver does not expect a message include no SLA in place between the Sender and the Receiver.

The SecuritiesMessageRejection message must not be used to reject an instruction message that cannot be processed for business reasons, for example, if information is missing in an instruction message or because securities are not available for settlement.

#### Outline

The SecuritiesMessageRejectionV03 MessageDefinition is composed of 3 MessageBuildingBlocks:

##### A. MessageIdentification

Reference that uniquely identifies a message from a business application standpoint.

##### B. RelatedReference

Reference to a linked message that was previously received.

##### C. Reason

Reason to reject the message.

## **CustodyStatementOfHoldingsV02**

### 18.1    **MessageDefinition Functionality**

#### Scope

An account servicer, for example, a transfer agent sends the CustodyStatementOfHoldings message to the account owner, for example, a fund manager or an account owner's designated agent to provide detailed holdings of the portfolio at a specified moment in time.

The message provides, at a moment in time, the quantity and identification of the financial instruments that the account servicer holds for the account owner. The message can also include availability and the location of holdings to facilitate trading and minimise settlement issues.

The message reports all information per financial instrument, ie, when a financial instrument is held at multiple places of safekeeping, the total holdings for all locations can be provided.

#### Usage

The CustodyStatementOfHoldings message is used to provide detailed quantity and availability information for financial instrument holdings of a portfolio. The message should be sent at a frequency agreed bi-laterally between the account servicer and the account owner.

This message can be also be used to report where the financial instruments are safe-kept, physically or notionally. If a security is held in more than one safekeeping place, this can also be indicated.

This message can reflect all outstanding holding information or may only contain changes since the previously sent statement.

The CustodyStatementOfHoldings message can only be used to list the holdings of a single (master) account. However, it is possible to break down these holdings into one or several sub-accounts. Therefore, this message can be used to either specify holdings at

- the main account level, or,
- the sub-account level.

## **ReversalOfTransferInConfirmationV09**

### 31.1 **MessageDefinition Functionality**

#### Scope

The ReversalOfTransferInConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to cancel a previously sent transfer in confirmation.

#### Usage

The ReversalOfTransferInConfirmation message is used to reverse a previously sent transfer in confirmation.

To request the reversal of a transfer in confirmation, the transfer reference of the transfer in instruction, as specified in the original TransferInInstruction message, is specified in the transfer reference element. The executing party's reference for the execution of the transfer may also be specified in the TransferConfirmationReference element.

The message identification of the original TransferInConfirmation message may also be quoted in PreviousReference but this is not recommended.

#### Outline

The ReversalOfTransferInConfirmationV09 MessageDefinition is composed of 9 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. MasterReference

Unique and unambiguous identifier for a group of individual transfers as assigned by the instructing party. This identifier links the individual transfers together.

F. Function

Function of the transfer-in, that is, whether the message is used as a reversal of a previously sent confirmation or as a reversal of a previously sent advice. The absence of Function indicates the message is a reversal of a previously sent confirmation.

G. ReversalReferences

Reference of the transfer confirmation to be reversed.

**H. MarketPracticeVersion**

Identifies the market practice to which the message conforms.

**I. CopyDetails**

Information provided when the message is a copy of a previous message.

# **RequestForTransferStatusReportV08**

### 32.1 **MessageDefinition Functionality**

#### Scope

The RequestForTransferStatusReport is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent to request the status of a previously instructed transfer.

The RequestForTransferStatusReport may also be sent by any party in the transfer transaction to another party in the transfer transaction chain to request information relevant for the settlement of a transfer transaction.

#### Usage

The RequestForTransferStatusReport is used to request either:

- the status of one or several information requests or transfer instructions or,
- the status of one or several transfer cancellation instructions, or
- information relevant to one or more transfer instructions.

#### Outline

The RequestForTransferStatusReportV08 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. RequestDetails

Information to identify the transfer for which the status is requested.

C. MarketPracticeVersion

Identifies the market practice to which the message conforms.

D. Extension

# 35 sese.012.001.11 PortfolioTransferInstructionV11

## 35.1 MessageDefinition Functionality

### Scope

The PortfolioTransferInstruction message is sent by an instructing party, for example, a (new) plan manager (transferee), to the executing party, for example, a (old) plan manager (transferor), on behalf of the initiating party, for example, an investor (client), to instruct the transfer of financial instruments from the client's account at the old plan manager (transferor) to the clients account at the new plan manager (transferee).

### Usage

The PortfolioTransferInstruction message is used to instruct one or more portfolio transfers for one client. Each portfolio transfer is for delivery to the same account. The account may be owned by one or more individual investors or one or more corporate investors.

If the instructing party does not have enough information to instruct the portfolio transfer, then it must first send an AccountHoldingInformationRequest message to the executing party in order to receive an AccountHoldingInformation message.

#### 38.4.15.4.1 TaxEfficientProduct <TaxEffcntPdct>

*Presence:* [1..1]

*Definition:* Portfolio is a government scheme to encourage investment in securities based unit and investment trusts, offering certain tax benefits. These are not investments in their own right but are tax exempt 'wrappers' in which equities, bonds and funds can be held to shelter them from various types of tax.

In the UK, a typical tax wrapper product is known as an 'ISA' (Individual Savings Account).

#### 40.4.15.5.1 TaxEfficientProduct <TaxEffcntPdct>

*Presence:* [1..1]

*Definition:* Portfolio is a government scheme to encourage investment in securities based unit and investment trusts, offering certain tax benefits. These are not investments in their own right but are tax exempt 'wrappers' in which equities, bonds and funds can be held to shelter them from various types of tax.

In the UK, a typical tax wrapper product is known as an 'ISA' (Individual Savings Account).

## **RedemptionBulkOrderV04**

### 41.1    **MessageDefinition Functionality**

#### Scope

The RedemptionBulkOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct a redemption from a financial instrument for two or more accounts.

#### Usage

The RedemptionBulkOrder message is used to bulk several individual orders into one bulk order. The individual orders come from different instructing parties, that is, account owners, but are for the same financial instrument. The RedemptionBulkOrder can result in one single bulk cash settlement or several individual cash settlements.

This message will be typically used by a party collecting orders, that is, a concentrator, bulking these individual orders into one bulk order before sending it to an executing party.

For a single redemption order, the RedemptionOrder message, not the RedemptionBulkOrder message, must be used.

If there are redemption orders for different financial instruments but for the same account, then the RedemptionOrder must be used.

#### Outline

The RedemptionBulkOrderV04 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. BulkOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

# 42 setr.002.001.04 RedemptionBulkOrderCancellationRequestV04

## 42.1 MessageDefinition Functionality

### Scope

The RedemptionBulkOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent RedemptionBulkOrder.

### Usage

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a RedemptionBulkOrderCancellationRequest is made using an OrderCancellationStatusReport message.

# 43 setr.003.001.04 RedemptionBulkOrderConfirmationV04

## 43.1 MessageDefinition Functionality

### Scope

The RedemptionBulkOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of execution for a previously received RedemptionBulkOrder message.

### Usage

The RedemptionBulkOrderConfirmation message is used to confirm the execution of all individual orders included in a previously sent RedemptionBulkOrder message.

There is usually one bulk confirmation message for one bulk order message.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the RedemptionBulkOrder message in which the individual order was conveyed may also be quoted in RelatedReference, but this is not recommended.

A RedemptionBulkOrder must in all cases be responded to by a RedemptionBulkOrderConfirmation and in no circumstances by a RedemptionOrderConfirmation.

If the executing party needs to confirm a RedemptionOrder instruction, then the RedemptionOrderConfirmation must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

### Outline

The RedemptionBulkOrderConfirmationV04 MessageDefinition is composed of 7 MessageBuildingBlocks:

## **RedemptionOrderV04**

### 44.1    **MessageDefinition Functionality**

#### Scope

The RedemptionOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct the redemption of one or more financial instruments for one investment fund account.

#### Usage

The RedemptionOrder message is used to instruct single redemption orders, that is, a message containing one order for one financial instrument and related to one investment account. The RedemptionOrder message may also be used for multiple orders, that is, a message containing several orders related to the same investment account for different financial instruments.

For a single redemption order, the RedemptionOrder message, not the RedemptionBulkOrder message, must be used.

If there are redemption orders for the same financial instrument but for different accounts that are to be communicated in a single message, then the RedemptionBulkOrder message must be used.

#### Outline

The RedemptionOrderV04 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. MultipleOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

# 46 setr.006.001.05 RedemptionOrderConfirmationV05

## 46.1 MessageDefinition Functionality

### Scope

The RedemptionOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of execution for a previously received RedemptionOrder message.

### Usage

The RedemptionOrderConfirmation message is used to confirm the execution of one or more individual orders.

A RedemptionOrder message containing more than one individual order may be responded to by more than one RedemptionOrderConfirmation message, as the valuation cycle of the financial instruments in each individual order may be different. When a RedemptionOrderConfirmation message contains fewer confirmations than originally instructed in the original RedemptionOrder message, there is no specification indication in the confirmation for this. Reconciliation must be based on the references.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the RedemptionOrder message in which the individual order was conveyed may also be quoted in RelatedReference but this is not recommended.

A RedemptionOrder must in all cases be responded to by a RedemptionOrderConfirmation message and in no circumstances by a RedemptionBulkOrderConfirmation message.

If the executing party needs to confirm one or more redemption orders for the same financial instrument then a RedemptionBulkOrderConfirmation message must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

## **SubscriptionBulkOrderV04**

### 47.1    **MessageDefinition Functionality**

#### Scope

The SubscriptionBulkOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct a subscription to a financial instrument for two or more accounts.

#### Usage

The SubscriptionBulkOrder message is used to bulk several individual orders into one bulk order. The individual orders come from different instructing parties, that is, account owners, but are for the same financial instrument. This message will typically be used by a party collecting orders and bulking these individual orders into one bulk order before sending it to another party.

For a single subscription order, the SubscriptionOrder message, not the SubscriptionBulkOrder message, must be used.

#### Outline

The SubscriptionBulkOrderV04 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. BulkOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

## **SubscriptionBulkOrderCancellationRequestV04**

### 48.1    **MessageDefinition Functionality**

#### Scope

The SubscriptionBulkOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent SubscriptionBulkOrder.

#### Usage

The SubscriptionBulkOrderCancellationRequest message is used to request the cancellation of one or more individual orders.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of one or more individual orders, the order reference of each individual order listed in the original SubscriptionBulkOrder message is specified in the order reference element. The message identification of the SubscriptionBulkOrder message which contains the individual orders to be cancelled may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a SubscriptionBulkOrderCancellationRequest is made using an OrderCancellationStatusReport message.

#### Outline

The SubscriptionBulkOrderCancellationRequestV04 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

D. MasterReference

Reference assigned to a set of orders or trades in order to link them together.

E. OrderReferences

Identification of the individual order to be cancelled.

F. CopyDetails

Information provided when the message is a copy of a previous message.

# 49 setr.009.001.04 SubscriptionBulkOrderConfirmationV04

## 49.1 MessageDefinition Functionality

### Scope

The SubscriptionBulkOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of the execution of a SubscriptionBulkOrder instruction.

### Usage

The SubscriptionBulkOrderConfirmation message is used to confirm the execution of all individual orders.

There is usually one bulk confirmation message for one bulk order message.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the SubscriptionBulkOrder message in which the individual order was conveyed may also be quoted in RelatedReference.

A SubscriptionBulkOrder must in all cases be responded to by a SubscriptionBulkOrderConfirmation and in no circumstances by a SubscriptionOrderConfirmation.

If the executing party needs to confirm a SubscriptionOrder instruction, then the SubscriptionOrderConfirmation must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

### Outline

The SubscriptionBulkOrderConfirmationV04 MessageDefinition is composed of 7 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. BulkExecutionDetails

General information related to the execution of the orders.

F. CopyDetails

Information provided when the message is a copy of a previous message.

G. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

## **SubscriptionOrderV04**

### 50.1    **MessageDefinition Functionality**

#### Scope

The SubscriptionOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct the subscription of one or more financial instruments for one investment fund account.

#### Usage

The SubscriptionOrder message is used to instruct single subscription orders, that is, a message containing one order for one financial instrument for one investment account. The SubscriptionOrder message may also be used for multiple orders, that is, a message containing several orders for the same investment account for different financial instruments.

For a single subscription order, the SubscriptionOrder message, not the SubscriptionBulkOrder message, must be used.

If there are subscription orders for the same financial instrument but for different accounts that are to be communicated in a single message, then the SubscriptionBulkOrder message must be used.

#### Outline

The SubscriptionOrderV04 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. MultipleOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

## **SubscriptionOrderCancellationRequestV04**

### 51.1    **MessageDefinition Functionality**

#### Scope

The SubscriptionOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent SubscriptionOrder.

#### Usage

The SubscriptionOrderCancellationRequest message is used to request the cancellation of one or more individual orders.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of one or more individual orders, the order reference of each individual order listed in the original SubscriptionOrder message is specified in the order reference element. The message identification of the SubscriptionOrder message which contains the individual orders to be cancelled may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a SubscriptionOrderCancellationRequest is made using an OrderCancellationStatusReport message.

#### Outline

The SubscriptionOrderCancellationRequestV04 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. MasterReference

Reference assigned to a set of orders or trades in order to link them together.

E. OrderReferences

Identification of the individual order to be cancelled.

F. CopyDetails

Information provided when the message is a copy of a previous message.

## **SubscriptionOrderConfirmationV05**

### 52.1    **MessageDefinition Functionality**

#### Scope

The SubscriptionOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of the execution of a SubscriptionOrder instruction.

#### Usage

The SubscriptionOrderConfirmation message is used to confirm the execution of one or more individual orders.

A SubscriptionOrder message containing more than one individual order may be responded to by more than one SubscriptionOrderConfirmation message, as the valuation cycle of the financial instruments in each individual order may be different. When a SubscriptionOrderConfirmation message contains fewer confirmations than originally instructed in the original SubscriptionOrder message, there is no specification indication in the confirmation for this. Reconciliation must be based on the references.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the SubscriptionOrder message in which the individual orders was conveyed may also be quoted in RelatedReference but this is not recommended.

A SubscriptionOrder must in all cases be responded to by a SubscriptionOrderConfirmation message and in no circumstances by a SubscriptionBulkOrderConfirmation message.

If the executing party needs to confirm one or more subscription orders for the same financial instrument, then a SubscriptionBulkOrderConfirmation message must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

#### Outline

# 53      **setr.013.001.04** **SwitchOrderV04**

## 53.1    **MessageDefinition Functionality**

### Scope

The SwitchOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct a switch transaction from a financial instrument or multiple financial instruments to a different specified financial instrument or instruments for a specified amount/quantity.

### Usage

The SwitchOrder message is used to either:

- instruct one switch transaction comprising one or more redemption legs and one or more subscription legs, that is, a single switch transaction that can be a one to one, many to one, many to many or one to many switch transaction, or,
- instruct one or many switch transactions each comprising one redemption leg and one subscription leg, that is, multiple simple switch transactions.

The SwitchOrder message may be used to either:

- instruct a switch transaction for one investment account, or,
- instruct a switch transaction for separate accounts at the redemption and subscription leg levels.

The message caters for a switch from one financial instrument to another financial instrument (within the same fund family), many to one, many to many and one to many.

The message caters for switch transactions that result in an additional cash payment from the investor or a transaction that results in a net payment to the investor. Not all institutions or funds permit this type of switch and acceptance is therefore not automatic.

There is no limitation on the number of switch legs in a switch message. The number allowed is defined by the fund prospectus or by the service level agreement (SLA) in place between the two parties. However, if the SwitchOrderDetails sequence is present more than once, then the RedemptionLegDetails and SubscriptionLegDetails sequences may only be present once.

If SwitchOrderDetails\InvestmentAccount is used, then the InvestmentAccountDetails sequences in SubscriptionLegDetails and RedemptionLegDetails are not allowed. This functionality is to be used by institutions that set up two accounts per investor, rather than one investment account.

There is no switch driver type in the message to indicate whether the switch is buy or sell driven. A driver is not needed since it is possible to indicate the total subscription amount or the total redemption amount. Only one of these two amounts should be used.

The subscription quantity can be expressed in one of the following ways:

- Amount: the monetary value (either GROSS or NET) of the financial instrument to be subscribed to, for example, the subscription of EUR 1,000 of financial instrument ISIN LU1234567890 or

- Unit: the number of units of the financial instrument to be subscribed to, for example, the subscription of 10 units of financial instrument ISIN LU1234567890 or
- Percentage of the total redemption amount: when the switch transaction is redemption driven, it is the part of the redemption amount that must be switched to a specific financial instrument, for example, the subscription quantity of financial instrument ISIN LU1234567890 represents 50% of the redemption amount of the financial instrument ISIN LU4444444444.

The redemption quantity can be expressed in one of the following ways:

- Amount: the monetary value (either GROSS or NET) of the financial instrument to be redeemed, for example, the redemption of EUR 1,000 of financial instrument ISIN LU1234567890, or
- Unit: the number of units of financial instrument to be redeemed, for example, the redemption of 10 units of financial instrument ISIN LU1234567890, or
- Rate: the part of the portfolio to be redeemed, for example, the redemption of 10% of the holdings in financial instrument ISIN LU1234567890, or
- Percentage of the total subscription amount: when the switch transaction is subscription driven, it is the part of the subscription amount that must be the result of the redemption of a specific financial instrument, for example, the redemption quantity in financial instrument ABC represents 50% of the subscription amount of the financial instrument ISIN LU4444444444.

## **SwitchOrderCancellationRequestV04**

### 54.1    **MessageDefinition Functionality**

#### Scope

The SwitchOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent SwitchOrder instruction.

#### Usage

The SwitchOrderCancellationRequest is used to cancel the entire previously sent SwitchOrder instruction/s and all the individual legs that it contains. There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of a switch order, the order reference of the original switch order is quoted in the order reference element. The message identification of the SwitchOrder message may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation request.

The rejection or acceptance of a SwitchOrderCancellationRequest is made using an OrderCancellationStatusReport message.

#### Outline

The SwitchOrderCancellationRequestV04 MessageDefinition is composed of 6 MessageBuildingBlocks:

- A. MessageIdentification  
Reference that uniquely identifies the message from a business application standpoint.
- B. PoolReference  
Collective reference identifying a set of messages.
- C. PreviousReference  
Reference to a linked message that was previously sent.
- D. MasterReference  
Reference assigned to a set of orders or trades in order to link them together.
- E. OrderReferences  
Identification of the individual order to be cancelled.
- F. CopyDetails  
Information provided when the message is a copy of a previous message.

## 54.3 Constraints

### C1 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered by the ISO 9362 Registration Authority in the BIC directory, and consists of eight (8) or eleven (11) contiguous characters.

### C2 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

### C3 SwitchRule

The cancellation of a switch order must be a full cancellation. Partial cancellations are not allowed, for example, the cancellation of a given leg.

## **SwitchOrderConfirmationV04**

### 55.1    **MessageDefinition Functionality**

#### Scope

The SwitchOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of the execution of a previously received SwitchOrder instruction.

#### Usage

The SwitchOrderConfirmation message is used to confirm that all the legs of the previously instructed switch order have been executed. The reference of the switch order confirmation is identified in DealReference.

The reference of the original switch order is specified in OrderReference. The message identification of the SwitchOrder message in which the switch order was conveyed may also be quoted in RelatedReference but this is not recommended.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

#### Outline

The SwitchOrderConfirmationV04 MessageDefinition is composed of 7 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

E. SwitchExecutionDetails

Information related to a switch execution.

F. CopyDetails

Information provided when the message is a copy of a previous message.

G. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

## **OrderInstructionStatusReportV04**

### **56.1    MessageDefinition Functionality**

#### Scope

The OrderInstructionStatusReport message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to report the status of an order from the time the executing party receives the order until the time the order is executed.

#### Usage

The OrderInstructionStatusReport message is used to report on the status of a subscription, redemption or a switch order.

The OrderInstructionStatusReport message may be used to give the status of:

- one order message by using OrderDetailsReport or,
- one or more individual order instructions by using IndividualOrderDetailsReport, or
- one or more switch orders by using SwitchOrderDetailsReport.

If the OrderInstructionStatusReport message is used to report the status of an individual order, then IndividualOrderDetailsReport is used and the order reference of the individual order is quoted in OrderReference. The message identification of the message in which the individual order was conveyed may also be quoted in RelatedReference but this is not recommended.

If the OrderInstructionStatusReport message is used to report the status of a switch order, then SwitchOrderDetailsReport is used and the order reference of the switch order is quoted in OrderReference. The message identification of the message in which the switch order was conveyed may also be quoted in RelatedReference but this is not recommended.

If the OrderInstructionStatusReport message is used to report the status of an entire order message, for example, the SubscriptionBulkOrder, or a SubscriptionOrder containing several orders, then OrderDetailsReport is used and the message identification of the order message is quoted in RelatedReference. All the orders within the message must have the same status.

One of the following statuses can be reported:

- an accepted status, or,
- an already executed status, or,
- a sent to next party status, or,
- a received status, or,
- a settled status, or,
- a communication problem with next party status, or,

- a confirmation amendment status, or,
- a done for the day status, or,
- a partially done status, or,
- an open status, or,
- a cancelled status, or
- a conditionally accepted status, or,
- a rejected status, or,
- a suspended status, or,
- a partially settled status, or,
- an in-repair status (only for an individual or switch order).

For a switch order, the OrderInstructionStatusReport message provides the status of the whole switch order, that is, it is not possible to accept one leg and to reject the other leg: the entire switch order has to be rejected. In order to identify the legs within the switch that are causing the problem, the leg is identified in either the RedemptionLegIdentification or SubscriptionLegIdentification elements.

When the OrderInstructionStatusReport is used to give the status of an individual or a switch order, the following can be specified:

- repaired conditions (for a switch, this is at the level of a leg),
- information related to the order, for example, settlement amount, number of units, expected trade date.

#### Outline

The OrderInstructionStatusReportV04 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. Reference

Reference to the message or communication that was previously received.

C. StatusReport

Status of the order.

D. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

## **OrderCancellationStatusReportV04**

### **57.1    MessageDefinition Functionality**

#### Scope

The OrderCancellationStatusReport message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to report the status of an order cancellation request that was previously received.

#### Usage

The OrderCancellationStatusReport message is used to provide the status of:

- one or more individual order cancellation requests by using IndividualCancellationStatusReport, or,
- an order cancellation request message by using CancellationStatusReport.

If the OrderCancellationStatusReport message is used to report the status of an individual order cancellation request, then the repetitive IndividualCancellationStatusReport sequence is used and the order reference of the individual order is quoted in OrderReference. The message identification of the message in which the individual order was conveyed may also be quoted in RelatedReference but this is not recommended.

If the OrderCancellationStatusReport message is used to report the status of an entire order cancellation request message, for example, the SubscriptionBulkOrderCancellationRequest, or a SubscriptionOrderCancellationRequest containing several orders, then the CancellationStatusReport sequence is used. The message identification of the order cancellation request message may also be quoted in RelatedReference but this is not recommended. All the order cancellation requests within the message must have the same status.

One of the following statuses can be reported:

- the order cancellation is pending, or,
- the order cancellation request is rejected, or,
- the order is cancelled.

When the cancellation is rejected, the reason for the rejection must be specified.

#### Outline

The OrderCancellationStatusReportV04 MessageDefinition is composed of 4 MessageBuildingBlocks:

##### A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

##### B. Reference

Reference to the message or communication that was previously received.

##### C. StatusReport

Status of the order cancellation.

#### D. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

### C3 ExtensionRule

This component may not be used without the explicit approval of the Registration Authority and without strict usage rules published by the Registration Authority.

### C4 IdentificationGuideline

It is recommended that ISIN is used in Identification.

When an ISIN code exists, it is strongly recommended that the ISIN be used.

### C5 MessageNameAndReferenceGuideline

*This constraint is defined at the MessageDefinition level.*

### C6 OrderOriginatorEligibility2Rule

OrderOriginatorEligibility may only be present if one or more of the parties identified in OwnerIdentification is/are the originator of the order.

**C7 OtherReferenceGuideline**

OtherReference should be used to reference an order cancellation 'message' sent in a proprietary way or used for a system reference. If OtherReference is present, OtherReference/MessageName must contain 'fax' or 'phone' or 'email', etc.

*This constraint is defined at the MessageDefinition level.*

## **RequestForOrderStatusReportV04**

### **58.1    MessageDefinition Functionality**

#### Scope

The RequestForOrderStatusReport message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the status of one or more order instructions or order cancellation requests.

#### Usage

The RequestForOrderStatusReport message is used to request the status of:

- one or several individual order instructions, or,
- one or several order messages, or
- one or several individual order cancellation requests, or,
- one or several order cancellation request messages.

The response to a RequestForOrderStatusReport message is the OrderInstructionStatusReport message or OrderCancellationStatusReport message.

If the RequestForOrderStatusReport message is used to request the status of several individual order instructions or one or more order instruction messages, then the instructing party may receive several OrderInstructionStatusReport messages from the executing party.

If the RequestForOrderStatusReport message is used to request the status of several individual order cancellation requests or one or more order cancellation messages, then the instructing party may receive several OrderCancellationStatusReport messages from the executing party.

When the RequestForOrderStatusReport is used to request the status of one or more individual orders or order cancellations, each individual order is identified with its order reference. The investment account and/or financial instrument related to the order can also be identified. The message identification of the message in which the individual order was conveyed may also be quoted in PreviousReference.

When the RequestForOrderStatusReport is used to request the status of an order message or an order cancellations request message, then the message identification of the order or cancellation message is identified in PreviousReference.

The RequestForOrderStatusReport message may not be used to request the status of an investment account, a transfer or the status of a financial instrument.

# 59 setr.047.001.02 SubscriptionOrderConfirmationCancellationInstructionV02

## 59.1 MessageDefinition Functionality

### Scope

The SubscriptionOrderConfirmationCancellationInstruction message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to cancel a previously sent SubscriptionOrderConfirmation.

### Usage

To request the cancellation of one or more individual order executions, the order reference and deal reference of each individual order execution in the original SubscriptionOrderConfirmation are specified in the order reference and deal reference elements respectively. The message identification of the SubscriptionOrderConfirmation message in which the individual order execution was conveyed may also be quoted in PreviousReference but this is not recommended. The AmendmentIndicator is used to specify whether the subscription order confirmation cancellation is to be followed by an amendment. An amendment of a subscription order confirmation is carried out by sending a SubscriptionOrderConfirmation message in which the AmendmentIndicator contains the value 'true'.

### Outline

The SubscriptionOrderConfirmationCancellationInstructionV02 MessageDefinition is composed of 8 MessageBuildingBlocks:

# 63 setr.055.001.02 SwitchOrderConfirmationCancellationInstructionV02

## 63.1 MessageDefinition Functionality

### Scope

The SwitchOrderConfirmationCancellationInstruction message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to cancel a previously sent SwitchOrderConfirmation.

### Usage

To request the cancellation of one or more individual order executions, the order reference and deal reference of each individual order execution in the original SwitchOrderConfirmation are specified in the order reference and deal reference elements respectively. The message identification of the SwitchOrderConfirmation message in which the individual order execution was conveyed may also be quoted in PreviousReference but this is not recommended. The AmendmentIndicator is used to specify whether the switch order confirmation cancellation is to be followed by an amendment. An amendment of a switch order confirmation is carried out by sending a SwitchOrderConfirmation message in which the AmendmentIndicator contains the value 'true'.

### Outline

The SwitchOrderConfirmationCancellationInstructionV02 MessageDefinition is composed of 8 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. AmendmentIndicator

Indicates whether a confirmation amendment message will follow the confirmation cancellation instruction or not.

F. MasterReference

Reference assigned to a set of orders or trades in order to link them together.

G. OrderReferences

Identification of the individual order confirmation to be cancelled.

H. CopyDetails

Information provided when the message is a copy of a previous message.

## **OrderConfirmationStatusReportV02**

### **64.1    MessageDefinition Functionality**

#### Scope

The OrderConfirmationStatusReport message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to report the status of an order confirmation or an order confirmation amendment.

#### Usage

The OrderConfirmationStatusReport message is used to report on the status of one or more individual:

- subscription confirmations,
- subscription confirmation amendments,
- redemption confirmations,
- redemption confirmation amendments,
- switch order confirmations,
- switch order confirmation amendments.

One of the following statuses can be reported:

- confirmation rejected, or,
- amendment rejected, or,
- sent to next party, or,
- communication problem with next party, or,
- confirmation accepted, or,
- confirmation received.

It is likely that the OrderConfirmationStatusReport is only sent by the order instructing party to the order executing party to reject an order confirmation or to reject an order confirmation amendment, although if an intermediary party is used, the statuses sent to next party and communication problem with next party are also likely be used. The statuses confirmation accepted and confirmation received would only be used in the event the order executing party sends a RequestForOrderConfirmationStatusReport message and one of the other statuses does not apply.

If the status being reported is either confirmation rejected or amendment rejected, then a reason for the rejection must be given.

The individual order confirmation or confirmation amendment for which the status is given is identified with its order reference. The message identification of the message in which the individual order

confirmation or confirmation amendment was conveyed may also be quoted in RelatedReference, but this is not recommended.

#### Outline

The OrderConfirmationStatusReportV02 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. Reference

Reference to the message or communication that was previously received.

C. IndividualOrderConfirmationDetailsReport

Status report details of an individual order confirmation.

D. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.
