## 2 **semt.002.001.12** **SecuritiesBalanceCustodyReportV12**

### 2.1 **MessageDefinition Functionality**

#### Scope

An account servicer sends a SecuritiesBalanceCustodyReport to an account owner to provide, at a moment in time, the quantity and identification of the financial instruments that the account servicer holds for the account owner.

The account servicer/owner relationship may be:

- a central securities depository or another settlement market infrastructure acting on behalf of their participants, or
- an agent (sub-custodian) acting on behalf of their global custodian customer, or
- a custodian acting on behalf of an investment management institution or a broker/dealer, or
- a transfer agent acting on behalf of a fund manager or an account owner's designated agent.

#### Usage

The message can also include availability and the location of holdings to facilitate trading and minimise settlement issues. The message reports all information per financial instrument, that is, when a financial instrument is held at multiple places of safekeeping, the total holdings for all locations can be provided.

The message should be sent at a frequency agreed bi-laterally between the account servicer and the account owner. The message may be provided on a trade date, contractual or settlement date basis.

There may be one or more intermediary parties, for example, an intermediary or a concentrator between the account owner and account servicer.

The message may also be used to:

- re-send a message previously sent,
- provide a third party with a copy of a message for information,
- re-send to a third party a copy of a message for information using the relevant elements in the Business Application Header.

## **SecuritiesBalanceAccountingReportV12**

### **3.1      MessageDefinition Functionality**

#### Scope

An account servicer sends a SecuritiesBalanceAccountingReport to an account owner to provide, at a moment in time, valuations of the portfolio together with details of each financial instrument holding.

The account servicer/owner relationship may be:

- an accounting agent acting on behalf of an account owner, or
- a transfer agent acting on behalf of a fund manager or an account owner's designated agent.

#### Usage

The message should be sent at a frequency agreed bi-laterally between the account servicer and the account owner.

The message can be sent either audited or un-audited and may be provided on a trade date, contractual or settlement date basis.

This message can only be used to list the holdings of a single (master) account. However, it is possible to break down these holdings into one or several sub-accounts. Therefore, the message can be used to either specify holdings at

- the main account level, or,
- the sub-account level.

This message can be used to report where the financial instruments are safe-kept, physically or notionally. If a security is held in more than one safekeeping place, this can also be indicated.

The SecuritiesBalanceAccountingReport message should not be used for trading purposes.

There may be one or more intermediary parties, for example, an intermediary or a concentrator between the account owner and account servicer.

The message may also be used to:

- re-send a message previously sent,
- provide a third party with a copy of a message for information,
- re-send to a third party a copy of a message for information using the relevant elements in the Business Application Header.

#### Outline

**C2 AdditionalDetailsRule**

Unless bilaterally agreed between the Sender and Receiver, if FinancialInstrumentAttributeAdditionalDetails is present, then it must not contain information that can be provided in a structured field.

**C3 AdditionalDetailsRule**

Unless bilaterally agreed between the Sender and Receiver, if InstructionProcessingAdditionalDetails is present, then it must not contain information that can be provided in a structured field.

**C4 AnyBIC**

**C5 BalanceFromToRule**

The SecuritiesBalanceType of BalanceFrom must be different from the SecuritiesBalanceType of BalanceTo.

**C6 BlockTradeGuideline**

In a block trade instruction, the total number of children must be provided using TotalOfLinkedInstructions.

The CurrentInstructionNumber of the parent must be 000. The children must have an incremental CurrentInstructionNumber from 001 to 999.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C7 Country**

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

**C8 CurrentInstructionNumberRule**

If the Sender wants to indicate that this instruction is linked to one or more settlement instruction, then the CurrentInstructionNumber must be specified.

**C9 CurrentInstructionNumberRule**

If the Sender wants to indicate that this instruction is linked to one or more settlement instruction, then the CurrentInstructionNumber must be specified.

**C10 DescriptionPresenceRule**

If Description is not present then either ISIN or at least one occurrence of OtherIdentification must be present.

**C11 DescriptionUsageRule**

Description must be used alone as the last resort.

**C12 DigitalTokenUnitUsageRule**

DigitalTokenUnit format may only be used for instruments identified with a digital token identifier.

**C13 ISINGuideline**

When an ISIN code exists, it is strongly recommended that the ISIN be used.

**C14 ISINPresenceRule**

If ISIN is not present then either Description or at least one occurrence of OtherIdentification must be present.

**C15 OtherIdentificationPresenceRule**

If OtherIdentification is not present then either ISIN or Description must be present.

Following Must be True
    /BlockChainAddressOrWallet Must be absent
```

*This constraint is defined at the MessageDefinition level.*

**C18 SafekeepingAccountOrBlockChainAddress2Rule**

If BlockChainAddressOrWallet is present, SafekeepingAccount must be absent.

```
On Condition
    /BlockChainAddressOrWallet is present
Following Must be True
    /SafekeepingAccount Must be absent
```

*This constraint is defined at the MessageDefinition level.*

**C19 SafekeepingAccountOrBlockChainAddress3Rule**

```
Following Must be True
    /SafekeepingAccount Must be present
Or    /BlockChainAddressOrWallet Must be present
```

*This constraint is defined at the MessageDefinition level.*

**C20 ShortLongNumberRule**

If CurrencyToSell is used, then it implies the following:

The currency to be sold to obtain settlement currency is provided by the currency to sell message element. Normally, this is the base currency of the portfolio.

The original TBA would be offset by an opposite transaction and replaced by buys or sells of individual pools. It is a date greater than the settlement date stated in the trade, for pools designed as settling late.

**C38 LinkageGuideline**

Global market practice rules on the use of the linkages exists for various business scenarios such as cancellations, settlement confirmation but also more complex processes like pair-off, back-to-back, block trades, sell-buy back, buy-sell back, securities lending and borrowing.

**C63 SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLocalCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C64 SafekeepingPlaceRule**

The SafekeepingPlace functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

**C65 SecuritiesFinancingSettlementRule**

In the framework of Securities Financing (repo, reverse repo, sec lending, sec borrowing), the SettlementInstruction can only be used for the plain vanilla settlement of the opening leg and closing leg.

free or against payment settlement instructions; the depository, the participant of the depository (Party1) and the client of Party1 (Party2).

The data format for the identification of Party1 depends on the market. If no country specific requirement is available, BIC is recommended.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

#### **C70 SettlementDetailsRule**

If SettlementDetails elements are used, then their conditions of use must be pre-agreed between account owner and account servicer.

#### **C71 SettlementParametersGuideline**

- Physical settlement:

In case of physical receipt at local agent level, the receiving agent must receive a receipt free instruction

for reconciliation purposes. If the final beneficiary of the securities uses a global custodian, the receipt free

instruction will be sent to the global custodian that will forward it to his receiving agent on the market.

For physical settlement, SettlementTransactionCondition/Physical must be used.

- Partial settlement:

This market practice only applies in markets where partial settlement is allowed.

If an account owner wants to specify in its original instruction that partial settlement is allowed or not, they

must use the PartialSettlementIndicator.

- Book Transfer:

The use of SecuritiesTransactionTypes OWNI, OWNE, INSP and PORT and other booktransfer related fields is governed by a market practice document.

- Block Trades:

The parent transaction must be identified using the Block Trade field with code BLPA. The children

transactions must be identified using the code BLCH.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

#### **C75 TradeDateTimeUTCRule**

#### Constraints

- **AdditionalDetailsRule**

Unless bilaterally agreed between the sender and receiver, if FXAdditionalDetails and/or SettlementInstructionProcessingAdditionalDetails are present, then they must not contain information that can be provided in a structured field.

- **CurrencyToBuyOrSellRule**

CurrencyToBuy and CurrencyToSell in the TradeDetails message component, provides an instruction to the account servicer to execute a foreign exchange deal on behalf of the account owner. The purpose of the forex deal is to fund the purchase of securities. This field is not to be used when standing instructions have been established.

If CurrencyToSell is used, then it implies the following:

- the instruction is a receive.
- the currency required for funding a purchase of securities, for example, the currency to be purchased, is the currency of the settlement amount. The currency to be sold to obtain settlement currency is provided by the currency to sell message element. Normally, this is the base currency of the portfolio.
- the amount of currency to be bought is equal to the settlement amount of the transaction. This implies the forex will not be used for other transactions and that a bulk forex deal must be instructed by other means.
- a forex deal to fund the purchase of securities should be executed in time for the currency to be available on the settlement date of the securities transaction.
- a bilateral agreement regarding the use of this field has been established.

If CurrencyToBuy is used, then it implies the following:

- the instruction is a delivery
- the currency received as proceeds from the sale of securities, for example, the currency to be sold, is the currency of the settlement amount. The currency to be bought is provided by the currency to buy message element. If proceeds are repatriated, this is in the base currency of the portfolio.
- the amount of currency to be sold is equal to the settlement amount of the transaction. This implies a bulk forex deal must be instructed by other means.
- a forex deal to repatriate proceeds after the sale of securities should be executed for the soonest possible value date after settlement of the securities, as permitted by market convention.
- a bilateral agreement regarding the use of this field has been established.

- **InvestorCapacityRule**

If InvestorCapacity is used, then the use of the codes needs to be bi-laterally agreed.

- **LateDeliveryDateRule**

If LateDeliveryDate is used, then the transaction must be a pool trade that results from the original TBA (To Be Announced). The original TBA would be offset by an opposite transaction and replaced by buys or sells of individual pools. It is a date greater than the settlement date stated in the trade, for pools designed as settling late.

- **PlaceOfTradeRule**

If PlaceOfTrade is used and an ISO 10383 MIC exists for the market to be identified, then the ISO 10383 Market Identifier Code (MIC) must be used.

- **TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

- **SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- **SafekeepingPlaceType/SharesHeldAtNCSD**: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.

- **SafekeepingPlaceType/SharesHeldAtICSD:** an ICSD's BIC will be used for ICSD internal, ICSD/ local and ICSD to ICSD settlement instructions.
- **SafekeepingPlaceType/SharesHeldAtLocalCustodian:** applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of **SafekeepingPlace** means that:

- The **SafekeepingPlace** information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The **SafekeepingPlace** is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

#### • **SafekeepingPlaceRule**

The **SafekeepingPlace** functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

**C52 SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.

- **SafekeepingPlaceType/SharesHeldAtICSD:** an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.
- **SafekeepingPlaceType/SharesHeldAtLocalCustodian:** applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of **SafekeepingPlace** means that:

- The **SafekeepingPlace** information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The **SafekeepingPlace** is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

### **C53 SafekeepingPlaceRule**

The **SafekeepingPlace** functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

These market practices are available on [www.smpg.info](http://www.smpg.info).

    /StandingSettlementInstructionDetails/Counterparty/Seller Must be present

*This constraint is defined at the MessageDefinition level.*

If the instruction is against payment, then **SettledAmount** must be present.

On Condition

    /TransactionIdentificationDetails/Payment is equal to value 'AgainstPaymentSettlement'

Following Must be True

    /SettledAmount Must be present

*This constraint is defined at the MessageDefinition level.*

SMPG recommends that at least three settlement parties be instructed in equity or fixed income receive

free or against payment settlement instructions; the depository, the participant of the depository (Party1) and the client of Party1 (Party2).

Unless bilaterally agreed between the account owner and servicer, if DenominationChoice is used, it must not contain information that can be provided in a structured field.

Partial settlement information only applies to markets where partial settlement is allowed.

The SettledQuantity field provides the quantity of securities effectively settled.

The other quantities (PreviouslySettledQuantity and/or RemainingToBeSettledQuantity) may be provided, but this is not mandatory.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **SafekeepingAccountOrBlockChainAddress1Rule**

- **SafekeepingAccountOrBlockchainAddress3Rule**

Either SafekeepingAccount or BlockchainAddressOrWallet must be present but not both.

Following Must be True

/SafekeepingAccount Must be present

Or /BlockchainAddressOrWallet Must be present

- **SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/ local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLocalCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **SafekeepingPlaceRule**

The SafekeepingPlace functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

If BlockChainAddressOrWallet is present, SafekeepingAccount must be absent.

**C48 SafekeepingAccountOrBlockChainAddress2Rule**

If BlockChainAddressOrWallet is present, SafekeepingAccount must be absent.

**C49 SafekeepingAccountOrBlockChainAddress3Rule**

Either SafekeepingAccount or BlockChainAddressOrWallet must be present but not both.

**C50 SafekeepingPlaceFormatOrLEIRule**

SafekeepingPlaceFormat must be present or LEI must be present.

**C51 SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.

- **SafekeepingPlaceType/SharesHeldAtICSD:** an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.
- **SafekeepingPlaceType/SharesHeldAtLocalCustodian:** applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of **SafekeepingPlace** means that:

- The **SafekeepingPlace** information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The **SafekeepingPlace** is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

## **C52 SafekeepingPlaceRule**

The **SafekeepingPlace** functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

## **C53 SellerSSIRule**

If standing settlement instruction applies and the instruction is a receipt, then Seller must be present.

```
On Condition
  /TransactionIdentificationDetails/SecuritiesMovementType is equal to
  value 'Receive'
  And /StandingSettlementInstructionDetails is present
Following Must be True
  /StandingSettlementInstructionDetails/Counterparty/Seller Must be present
```

*This constraint is defined at the MessageDefinition level.*

## **C54 SettledAmountRule**

If the instruction is against payment, then **SettledAmount** must be present.

```
On Condition
  /TransactionIdentificationDetails/Payment is equal to value
  'AgainstPaymentSettlement'
Following Must be True
  /SettledAmount Must be present
```

*This constraint is defined at the MessageDefinition level.*

## **C55 SettlementChainGuideline**

SMPG recommends that at least three settlement parties be instructed in equity or fixed income receive

free or against payment settlement instructions; the depository, the participant of the depository (Party1) and the client of Party1 (Party2).

The data format for the identification of Party1 depends on the market. If no country specific requirement is available, BIC is recommended.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C56 SettlementDetailsRule**

If SettlementDetails elements are used, then their conditions of use must be pre-agreed between account owner and account servicer.

**C57 SupplementaryDataRule**

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

**C58 TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C59 TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

**C60 VendorPresenceRule**

If the settlement standing instruction database is a vendor database, then the vendor must be identified.

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/ local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLocalCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **SafekeepingPlaceRule**

The SafekeepingPlace functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

## 24 **sese.030.001.10** **SecuritiesSettlementConditionsModificationRequestV10**

### 24.1 **MessageDefinition Functionality**

#### Scope

An account owner sends a SecuritiesSettlementConditionsModificationRequest to an account servicer to request the modification of a processing indicator or another non-matching information.

The account owner/servicer relationship may be:

- a central securities depository participant which has an account with a central securities depository.

It could also be, if agreed in a service level agreement:

- a global custodian which has an account with its local agent (sub-custodian), or
- an investment management institution which manage a fund account opened at a custodian, or
- a broker which has an account with a custodian, or
- a central securities depository which has an account with a custodian, another central securities depository or another settlement market infrastructure.

#### Usage

The message may also be used to:

- re-send a message previously sent,
- provide a third party with a copy of a message for information,
- re-send to a third party a copy of a message for information using the relevant elements in the Business Application Header.

In markets where this applies (for example, securities market infrastructures with no pre-settlement matching process), it is used by a party to approve, cancel or reject a transaction instructed by the counterparty.

This message cannot be used to request the modification of trade or event details.

The use of AdditionalInformation and its fields must be pre-agreed between account servicer and account owner. The fields in that sequence cannot be used to amend a trade or event detail unless authorised by country market practice.

# 25 **sese.031.001.10** **SecuritiesSettlementConditionModificationStatusAdviceV10**

## 25.1 **MessageDefinition Functionality**

### Scope

An account servicer sends a SecuritiesSettlementConditionsModificationStatusAdvice to an account owner to advise the status of a modification request previously instructed by the account owner.

The account servicer/owner relationship may be:

- a central securities depository or another settlement market infrastructure acting on behalf of their participants
- an agent (sub-custodian) acting on behalf of their global custodian customer, or
- a custodian acting on behalf of an investment management institution or a broker/dealer.

### Usage

A SecuritiesSettlementConditionsModificationRequest may contain requests on multiple transactions. However, one SecuritiesSettlementConditionsModificationStatusAdvice must be sent per transaction modified unless the SecuritiesSettlementConditionsModificationRequest is rejected as a whole.

The message may also be used to:

- re-send a message previously sent,
- provide a third party with a copy of a message for information,
- re-send to a third party a copy of a message for information using the relevant elements in the Business Application Header.

### Outline

The SecuritiesSettlementConditionModificationStatusAdviceV10 MessageDefinition is composed of 7 MessageBuildingBlocks:

- RequestReference**  
Identification of the SecuritiesSettlementConditionsModificationRequest.
- AccountOwner**  
Party that legally owns the account.
- SafekeepingAccount**  
Account to or from which a securities entry is made.
- BlockChainAddressOrWallet**

---

Blockchain address or wallet where digital assets are maintained. This is the equivalent of safekeeping account for digital assets.

E. RequestDetails

Details of the request.

F. ProcessingStatus

Provides details on the processing status of the request.

G. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

### 26.1 **MessageDefinition Functionality**

#### Scope

An account servicer sends a SecuritiesSettlementTransactionGenerationNotification to an account owner to advise the account owner of a securities settlement transaction that has been generated/created by the account servicer for the account owner. **C49 QualifiedForeignIntermediaryRule**

If Qualified Foreign Intermediary is used, then the instruction must be a delivery.

**C50 ReceivingDepositoryAndParty1Rule**

And /ReceivingSettlementParties/Party1 Must be present

Either SafekeepingAccount or BlockChainAddressOrWallet must be present but not both.

**C60 SafekeepingPlaceFormatOrLEIRule**

SafekeepingPlaceFormat must be present or LEI must be present.

**C61 SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLocalCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C62 SafekeepingPlaceRule**

The SafekeepingPlace functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

**C63 SettlementAmountRule**

If the TransactionIdentificationDetails/Payment equal to "Against Payment Settlement" (APMT) then SettlementAmount must be present.

On Condition

```
/TransactionIdentificationDetails/Payment is equal to value
'AgainstPaymentSettlement'
```

Following Must be True

```
/SettlementAmount Must be present
```

*This constraint is defined at the MessageDefinition level.*

---

**C64 SettlementChainGuideline**

SMPG recommends that at least three settlement parties be instructed in equity or fixed income receive

free or against payment settlement instructions; the depository, the participant of the depository (Party1) and the client of Party1 (Party2).

The data format for the identification of Party1 depends on the market. If no country specific requirement is available, BIC is recommended.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C65 SettlementDetailsRule**

If SettlementDetails elements are used, then their conditions of use must be pre-agreed between account owner and account servicer.

**C66 SettlementParametersGuideline**

- Physical settlement:

In case of physical receipt at local agent level, the receiving agent must receive a receipt free instruction

for reconciliation purposes. If the final beneficiary of the securities uses a global custodian, the receipt free

instruction will be sent to the global custodian that will forward it to his receiving agent on the market.

For physical settlement, SettlementTransactionCondition/Physical must be used.

- Partial settlement:

This market practice only applies in markets where partial settlement is allowed.

If an account owner wants to specify in its original instruction that partial settlement is allowed or not, they

must use the PartialSettlementIndicator.

- Book Transfer:

The use of SecuritiesTransactionTypes OWNI, OWNE, INSP and PORT and other booktransfer related fields is governed by a market practice document.

- Block Trades:

The parent transaction must be identified using the BlocTrade field with code BLPA. The children

transactions must be identified using the code BLCH.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C67 SettlementStatusAndMatchedRule**

If settlement status/reason is used alone, then it means that the transaction is matched (if a matching process exists in the concerned market or at the concerned account servicer).

**C68 ShortLongNumberRule**

ShortNumber must contain the FIN message type number of the linked message. LongNumber must contain the XML message identifier of the linked message.

**C69 SupplementaryDataRule**

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

**C70 TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C71 TradeDateTimeUTCRule**

If Trade Date/Time is present with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

**C72 WithLinkageRule**

If Code WITH is used, then the one or more instruction which are linked become bound and which must be executed together. Even if one single transactions/instructions/notifications can not be executed, then all the other transactions/instructions/notifications must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 transactions/instructions/notifications.

	<b>SettlementInstructionProcessingAdditionalDetails</b> <SttlmInstrPrpgAddtlDtIs>	[0..1]	Text		757

#### Constraints

- **AdditionalDetailsRule**

Unless bilaterally agreed between the sender and receiver, if FXAdditionalDetails and/or SettlementInstructionProcessingAdditionalDetails are present, then they must not contain information that can be provided in a structured field.

- **CurrencyToBuyOrSellRule**

CurrencyToBuy and CurrencyToSell in the TradeDetails message component, provides an instruction to the account servicer to execute a foreign exchange deal on behalf of the account

owner. The purpose of the forex deal is to fund the purchase of securities. This field is not to be used when standing instructions have been established.

If CurrencyToSell is used, then it implies the following:

- the instruction is a receive.
- the currency required for funding a purchase of securities, for example, the currency to be purchased, is the currency of the settlement amount. The currency to be sold to obtain settlement currency is provided by the currency to sell message element. Normally, this is the base currency of the portfolio.
- the amount of currency to be bought is equal to the settlement amount of the transaction. This implies the forex will not be used for other transactions and that a bulk forex deal must be instructed by other means.
- a forex deal to fund the purchase of securities should be executed in time for the currency to be available on the settlement date of the securities transaction.
- a bilateral agreement regarding the use of this field has been established.

If CurrencyToBuy is used, then it implies the following:

- the instruction is a delivery
- the currency received as proceeds from the sale of securities, for example, the currency to be sold, is the currency of the settlement amount. The currency to be bought is provided by the currency to buy message element. If proceeds are repatriated, this is in the base currency of the portfolio.
- the amount of currency to be sold is equal to the settlement amount of the transaction. This implies a bulk forex deal must be instructed by other means.
- a forex deal to repatriate proceeds after the sale of securities should be executed for the soonest possible value date after settlement of the securities, as permitted by market convention.
- a bilateral agreement regarding the use of this field has been established.

- **InvestorCapacityRule**

If InvestorCapacity is present then the use of the codes needs to be bi-laterally agreed.

- **LateDeliveryDateRule**

If LateDeliveryDate is present, then the transaction must be a pool trade that results from the original TBA (To Be Announced). The original TBA would be offset by an opposite transaction and replaced by buys or sells of individual pools. It is a date greater than the settlement date stated in the trade, for pools designed as settling late.

- **PlaceOfTradeRule**

If PlaceOfTrade is present and an ISO 10383 MIC exists for the market to be identified, then the ISO 10383 Market Identifier Code (MIC) must be used.

- **TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

If Trade Date/Time is present with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

Either SafekeepingAccount or BlockChainAddressOrWallet must be present but not both.

Following Must be True

/SafekeepingAccount Must be present

Or /BlockChainAddressOrWallet Must be present

- **SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.

- **SafekeepingPlaceType/SharesHeldAtICSD:** an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.
- **SafekeepingPlaceType/SharesHeldAtLocalCustodian:** applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of **SafekeepingPlace** means that:

- The **SafekeepingPlace** information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The **SafekeepingPlace** is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

#### • **SafekeepingPlaceRule**

The **SafekeepingPlace** functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

instruction will be sent to the global custodian that will forward it to his receiving agent on the market.

For physical settlement, SettlementTransactionCondition/Physical must be used.

**• Partial settlement:**

This market practice only applies in markets where partial settlement is allowed.

If an account owner wants to specify in its original instruction that partial settlement is allowed or not, they

must use the PartialSettlementIndicator.

**• Book Transfer:**

The use of SecuritiesTransactionTypes OWNI, OWNE, INSP and PORT and other booktransfer related fields is governed by a market practice document.

**• Block Trades:**

The parent transaction must be identified using the BlocTrade field with code BLPA. The children transactions must be identified using the code BLCH.

**C57 SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLoaclCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

#### **C58 SafekeepingPlaceRule**

The SafekeepingPlace functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

#### **C59 SecuritiesMarketPracticeGroupGuideline**

#### **C63 SettlementChainGuideline**

SMPG recommends that at least three settlement parties be instructed in equity or fixed income receive

free or against payment settlement instructions; the depository, the participant of the depository (Party1) and the client of Party1 (Party2).

The data format for the identification of Party1 depends on the market. If no country specific requirement is available, BIC is recommended.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

#### **C64 SettlementDetailsRule**

If SettlementDetails elements are used, then their conditions of use must be pre-agreed between account owner and account servicer.

#### **C69 VendorPresenceRule**

If the settlement standing instruction database is a vendor database, then the vendor must be identified.

#### **C70 WithLinkageRule**

If Code WITH is used, then the one or more instruction which are linked become bound and which must be executed together. Even if one single transactions/instructions/notifications can not be executed, then all the other transactions/instructions/notifications must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 transactions/instructions/notifications.

### Constraints

- **AdditionalDetailsRule**

Unless bilaterally agreed between the sender and receiver, if FXAdditionalDetails and/or SettlementInstructionProcessingAdditionalDetails are present, then they must not contain information that can be provided in a structured element.

- **CurrencyToBuyOrSellRule**

CurrencyToBuy and CurrencyToSell in the TradeDetails message component, provides an instruction to the account servicer to execute a foreign exchange deal on behalf of the account owner. The purpose of the forex deal is to fund the purchase of securities. This field is not to be used when standing instructions have been established.

If CurrencyToSell is used, then it implies the following:

- the instruction is a receive.

- the currency required for funding a purchase of securities, for example, the currency to be purchased, is the currency of the settlement amount. The currency to be sold to obtain settlement currency is provided by the currency to sell message element. Normally, this is the base currency of the portfolio.

- the amount of currency to be bought is equal to the settlement amount of the transaction. This implies the forex will not be used for other transactions and that a bulk forex deal must be instructed by other means.
- a forex deal to fund the purchase of securities should be executed in time for the currency to be available on the settlement date of the securities transaction.
- a bilateral agreement regarding the use of this field has been established.

If CurrencyToBuy is used, then it implies the following:

- the instruction is a delivery
- the currency received as proceeds from the sale of securities, for example, the currency to be sold, is the currency of the settlement amount. The currency to be bought is provided by the currency to buy message element. If proceeds are repatriated, this is in the base currency of the portfolio.
- the amount of currency to be sold is equal to the settlement amount of the transaction. This implies a bulk forex deal must be instructed by other means.
- a forex deal to repatriate proceeds after the sale of securities should be executed for the soonest possible value date after settlement of the securities, as permitted by market convention.
- a bilateral agreement regarding the use of this field has been established.

- **InvestorCapacityRule**

If InvestorCapacity is used, then the use of the codes needs to be bi-laterally agreed.

- **PlaceOfTradeRule**

If PlaceOfTrade is used and an ISO 10383 MIC exists for the market to be identified, then the ISO 10383 Market Identifier Code (MIC) must be used.

- **TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

Following Must be True

/SafekeepingAccount Must be present

Or /BlockChainAddressOrWallet Must be present

- **SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.

- **SafekeepingPlaceType/SharesHeldAtICSD:** an ICSD's BIC will be used for ICSD internal, ICSD/ local and ICSD to ICSD settlement instructions.
- **SafekeepingPlaceType/SharesHeldAtLocalCustodian:** applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of **SafekeepingPlace** means that:

- The **SafekeepingPlace** information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The **SafekeepingPlace** is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **SafekeepingPlaceRule**

The **SafekeepingPlace** functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLoaclCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C72 SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtLoaclCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting

at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

### **C75 SettlementChainGuideline**

SMPG recommends that at least three settlement parties be instructed in equity or fixed income receive

free or against payment settlement instructions; the depository, the participant of the depository (Party1) and the client of Party1 (Party2).

The data format for the identification of Party1 depends on the market. If no country specific requirement is available, BIC is recommended.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

### **C76 SettlementDetailsElementsUsageRule**

Conditions of use of the codes for the SettlementDetails field must be pre-agreed between account owner and account servicer.

### **C77 ShortLongNumberRule**

ShortNumber must contain the FIN message type number of the linked message. LongNumber must contain the XML message identifier of the linked message.

### **C78 SupplementaryDataRule**

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

### **C79 TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C80 TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**C81 TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

**C82 TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

**C83 TransactionIdentificationPresenceRule**

If AccountOwnerTransactionIdentification is NONREF then at least one of the other references must be present.

**C84 VendorPresenceRule**

If the settlement standing instruction database is a vendor database, then the vendor must be identified.

**C85 WithLinkageRule**

If Code WITH is used, then the one or more instruction which are linked become bound and which must be executed together. Even if one single transactions/instructions/notifications can not be executed, then all the other transactions/instructions/notifications must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 transactions/instructions/notifications.

	<b>SettlementInstructionProcessingAdditionalDetails</b> <SttlmInstrPrccAddtlDtls>	[0..1]	Text		1062

#### Constraints

- AdditionalDetailsRule**

Unless bilaterally agreed between the sender and receiver, if FXAdditionalDetails and/or SettlementInstructionProcessingAdditionalDetails are present, then they must not contain information that can be provided in a structured field.

- CurrencyToBuyOrSellRule**

CurrencyToBuy and CurrencyToSell in the TradeDetails message component, provides an instruction to the account servicer to execute a foreign exchange deal on behalf of the account owner. The purpose of the forex deal is to fund the purchase of securities. This field is not to be used when standing instructions have been established.

If CurrencyToSell is used, then it implies the following:

- the instruction is a receive.
- the currency required for funding a purchase of securities, for example, the currency to be purchased, is the currency of the settlement amount. The currency to be sold to obtain settlement currency is provided by the currency to sell message element. Normally, this is the base currency of the portfolio.
- the amount of currency to be bought is equal to the settlement amount of the transaction. This implies the forex will not be used for other transactions and that a bulk forex deal must be instructed by other means.
- a forex deal to fund the purchase of securities should be executed in time for the currency to be available on the settlement date of the securities transaction.
- a bilateral agreement regarding the use of this field has been established.

If CurrencyToBuy is used, then it implies the following:

- the instruction is a delivery
- the currency received as proceeds from the sale of securities, for example, the currency to be sold, is the currency of the settlement amount. The currency to be bought is provided by the currency to buy message element. If proceeds are repatriated, this is in the base currency of the portfolio.
- the amount of currency to be sold is equal to the settlement amount of the transaction. This implies a bulk forex deal must be instructed by other means.
- a forex deal to repatriate proceeds after the sale of securities should be executed for the soonest possible value date after settlement of the securities, as permitted by market convention.
- a bilateral agreement regarding the use of this field has been established.

- **InvestorCapacityRule**

If InvestorCapacity is used, then the use of the codes needs to be bi-laterally agreed.

- **LateDeliveryDateRule**

If LateDeliveryDate is used, then the transaction must be a pool trade that results from the original TBA (To Be Announced). The original TBA would be offset by an opposite transaction and replaced by buys or sells of individual pools. It is a date greater than the settlement date stated in the trade, for pools designed as settling late.

- **PlaceOfTradeRule**

If PlaceOfTrade is used and an ISO 10383 MIC exists for the market to be identified, then the ISO 10383 Market Identifier Code (MIC) must be used.

- **TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

**Constraints****• DenominationRule**

Unless bilaterally agreed between the account owner and servicer, if DenominationChoice is used, it must not contain information that can be provided in a structured field.

**• SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/ local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLoaclCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

#### Constraints

- **AdditionalDetailsRule**

Unless bilaterally agreed between the sender and receiver, if FXAdditionalDetails and/or SettlementInstructionProcessingAdditionalDetails are present, then they must not contain information that can be provided in a structured field.

- **CurrencyToBuyOrSellRule**

CurrencyToBuy and CurrencyToSell in the TradeDetails message component, provides an instruction to the account servicer to execute a foreign exchange deal on behalf of the account owner. The purpose of the forex deal is to fund the purchase of securities. This field is not to be used when standing instructions have been established.

If CurrencyToSell is used, then it implies the following:

- the instruction is a receive.
- the currency required for funding a purchase of securities, for example, the currency to be purchased, is the currency of the settlement amount. The currency to be sold to obtain settlement currency is provided by the currency to sell message element. Normally, this is the base currency of the portfolio.
- the amount of currency to be bought is equal to the settlement amount of the transaction. This implies the forex will not be used for other transactions and that a bulk forex deal must be instructed by other means.
- a forex deal to fund the purchase of securities should be executed in time for the currency to be available on the settlement date of the securities transaction.
- a bilateral agreement regarding the use of this field has been established.

If CurrencyToBuy is used, then it implies the following:

- the instruction is a delivery
- the currency received as proceeds from the sale of securities, for example, the currency to be sold, is the currency of the settlement amount. The currency to be bought is provided by the currency to buy message element. If proceeds are repatriated, this is in the base currency of the portfolio.
- the amount of currency to be sold is equal to the settlement amount of the transaction. This implies a bulk forex deal must be instructed by other means.
- a forex deal to repatriate proceeds after the sale of securities should be executed for the soonest possible value date after settlement of the securities, as permitted by market convention.
- a bilateral agreement regarding the use of this field has been established.

- **InvestorCapacityRule**

If InvestorCapacity is used, then the use of the codes needs to be bi-laterally agreed.

- **LateDeliveryDateRule**

If LateDeliveryDate is used, then the transaction must be a pool trade that results from the original TBA (To Be Announced). The original TBA would be offset by an opposite transaction and replaced by buys or sells of individual pools. It is a date greater than the settlement date stated in the trade, for pools designed as settling late.

- **PlaceOfTradeRule**

If PlaceOfTrade is used and an ISO 10383 MIC exists for the market to be identified, then the ISO 10383 Market Identifier Code (MIC) must be used.

- **TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

**Constraints****• DenominationRule**

Unless bilaterally agreed between the account owner and servicer, if DenominationChoice is used, it must not contain information that can be provided in a structured field.

**• SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/ local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLoaclCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

	<b>SettlementInstructionProcessingAdditionalDetails</b> <SttlmInstrPrcgAddtlDtIs>	[0..1]	Text		1129

#### Constraints

- **AdditionalDetailsRule**

Unless bilaterally agreed between the sender and receiver, if FXAdditionalDetails and/or SettlementInstructionProcessingAdditionalDetails are present, then they must not contain information that can be provided in a structured field.

- **CurrencyToBuyOrSellRule**

CurrencyToBuy and CurrencyToSell in the TradeDetails message component, provides an instruction to the account servicer to execute a foreign exchange deal on behalf of the account owner. The purpose of the forex deal is to fund the purchase of securities. This field is not to be used when standing instructions have been established.

---

If CurrencyToSell is used, then it implies the following:

- the instruction is a receive.
- the currency required for funding a purchase of securities, for example, the currency to be purchased, is the currency of the settlement amount. The currency to be sold to obtain settlement currency is provided by the currency to sell message element. Normally, this is the base currency of the portfolio.
- the amount of currency to be bought is equal to the settlement amount of the transaction. This implies the forex will not be used for other transactions and that a bulk forex deal must be instructed by other means.
- a forex deal to fund the purchase of securities should be executed in time for the currency to be available on the settlement date of the securities transaction.
- a bilateral agreement regarding the use of this field has been established.

If CurrencyToBuy is used, then it implies the following:

- the instruction is a delivery
- the currency received as proceeds from the sale of securities, for example, the currency to be sold, is the currency of the settlement amount. The currency to be bought is provided by the currency to buy message element. If proceeds are repatriated, this is in the base currency of the portfolio.
- the amount of currency to be sold is equal to the settlement amount of the transaction. This implies a bulk forex deal must be instructed by other means.
- a forex deal to repatriate proceeds after the sale of securities should be executed for the soonest possible value date after settlement of the securities, as permitted by market convention.
- a bilateral agreement regarding the use of this field has been established.

- **InvestorCapacityRule**

If InvestorCapacity is used, then the use of the codes needs to be bi-laterally agreed.

- **LateDeliveryDateRule**

If LateDeliveryDate is used, then the transaction must be a pool trade that results from the original TBA (To Be Announced). The original TBA would be offset by an opposite transaction and replaced by buys or sells of individual pools. It is a date greater than the settlement date stated in the trade, for pools designed as settling late.

- **PlaceOfTradeRule**

If PlaceOfTrade is used and an ISO 10383 MIC exists for the market to be identified, then the ISO 10383 Market Identifier Code (MIC) must be used.

- **TradeDateGuideline**

In addition to the settlement date (ISO 20022 mandatory), trade date is one of the 10 common elements recommended by SMPG for equities and fixed income settlement instructions.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **TradeDateTimeUTCRule**

If Trade Date/Time is used with a time or a time + UTC indicator, then it must be the local time of the place of trade, for example, of the stock exchange, or of the selling broker for OTC.

- **SafekeepingAccountOrBlockChainAddress1Rule**

If SafekeepingAccount is present, BlockChainAddressOrWallet must be absent.

If BlockChainAddressOrWallet is present, SafekeepingAccount must be absent.

On Condition

/BlockChainAddressOrWallet is present

Following Must be True

/SafekeepingAccount Must be absent

- **SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.

- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/local and ICSD to ICSD settlement instructions.

- SafekeepingPlaceType/SharesHeldAtLoaclCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

• **SafekeepingPlaceRule**

The SafekeepingPlace functionality in the settlement instructions is only to be used for global custodians that allow their clients to specify where the securities are to be held, for example, in an ICSD account versus an account at the local CSD.

- re-send a message sent by the account owner to the account servicer,
- provide a third party with a copy of a message being sent by the account owner for information,
- re-send to a third party a copy of a message being sent by the account owner for information

A001	IC30360ISDAor30360AmericanBasicRule	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). This is

CodeName	Name	Definition
		the most commonly used 30/360 method for US straight and convertible bonds.
A002	IC30365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th).
A003	IC30Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual365Fixed	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	ActualActualICMA	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi-interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi-interest period and the intermediate results are summed up.
A007	IC30E360orEuroBondBasismodel1	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. However, if the

CodeName	Name	Definition
		last day of the maturity coupon period is the last day of February, it will not be assumed to be the 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	ActualActualISDA	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall (falling on a normal year, year) divided by 365, added to the actual number of days of the interest period that fall (falling on a leap year, year) divided by 366.
A009	Actual365LorActuActubasisRule	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	ActualActualAFB	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year subperiods counting backwards from the end of the coupon period (a year backwards from 28 Feb being 29 Feb, if it exists). The first of the subperiods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each subperiod and the intermediate results are summed up.
A011	IC30360ICMAor30360basicrule	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999.
A012	IC30E2360orEurobondbasismodel2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is

		higher and if the period is one of a regular schedule. This means that the 31st is assumed to be the 30th and 28 Feb of a non-leap year is assumed to be equivalent to 29 Feb when the first day of the interest period is the 29th, or to 30 Feb when the first day of the interest period is the 30th or the 31st. The 29th day of February in a leap year is assumed to be equivalent to 30 Feb when the first day of the interest period is the 30th or the 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on 30 Feb when the end of the period is the 30th or the 31st, or two days of interest in February when the end of the period is the 29th, or three days of interest in February when it is 28 Feb of a non-leap year and the end of the period is before the 29th.
A013	IC30E3360orEurobondbasismodel3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be the 30th, even if it is the last day of the maturity coupon period.
A014	Actual365NL	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.

EXRI	CallOnIntermediateSecurities	Call or exercise on nil paid securities or intermediate securities resulting from an intermediate securities distribution (RHDI). This code is used for the second event, when an intermediate securities' issue (rights/coupons) is composed of two events, the first event being the distribution of intermediate securities.
CAPD	CapitalDistribution	Corporate event pays shareholders an amount in cash issued from the capital account. There is no reduction to the face value of a single share (or the share has no par value). The number of circulating shares remains unchanged.
CAPG	CapitalGainsDistribution	Event is the distribution of profits resulting from the sale of securities. Shareholders of mutual funds, unit trusts, or SICAVs are recipients of capital gains distributions and are often reinvested in additional shares of the fund.
CAPI	Capitalisation	Increase of the current principal of a debt instrument without increasing the nominal value. It normally arises from the incorporation of due but unpaid interest into the principal. This is commonly done by increasing the pool factor value, for example, capitalisation, and negative amortisation.
DRCA	CashDistributionFromNonEligibleSecuritiesSales	Distribution to shareholders of cash resulting from the selling of non-eligible securities, for example, in the frame of a depositary receipt program.

CodeName	Name	Definition

A company may not grant options which enable the holder to take up unissued shares at a time which is five or more years from the date of the grant. Option holders are not members of a company. They are contingent creditors of a company and hence may, in some instances, be entitled to vote on and be bound by a scheme of arrangement between the creditors and the company. As many options have multiple exercise periods a company option will either lapse or carry on to the next expiry date.
CLSA	ClassActionProposedSettlement	Situation where interested parties seek restitution for financial loss. The security holder may be offered the opportunity to join a class action proceeding and would need to respond with an instruction.
CONS	Consent	Procedure that aims to obtain consent of holder to a proposal by the issuer or a third party without convening a meeting. For example, consent to change the terms of a bond.

CodeName	Name	Definition

DRIP	DividendReinvestment	Dividend payment where holders can keep cash or have the cash reinvested in the market by the issuer into additional shares in the issuing company. To be distinguished from DVOP as the company invests the dividend in the market rather than creating new share capital in exchange for the dividend.
DRAW	Drawing	Securities are redeemed in part before the scheduled final maturity date. It is done without any pool factor reduction. The redemption is reflected in a debit of the face amount (FAMT). Drawing is distinct from partial call since drawn bonds are chosen by lottery. Therefore, not every holder is affected in the same way.
DTCH	DutchAuction	Action by a party wishing to acquire a security. Holders of the security are invited to make an offer to sell, within a specific price range. The acquiring party will buy from the holder with lowest offer.

#### Constraints

- **DenominationRule**

Unless bilaterally agreed between the account owner and servicer, if DenominationChoice is used, it must not contain information that can be provided in a structured field.

- **SafekeepingPlaceGuideline**

When used (see usage rule SafekeepingPlaceRule), unless special arrangements exist between the account servicer and the account owner, it is recommended to use the place of safekeeping field following the market practice described below:

- SafekeepingPlaceType/SharesHeldAtNCSD: a NCSD's BIC will be used for domestic and NCSD to NCSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtICSD: an ICSD's BIC will be used for ICSD internal, ICSD/ local and ICSD to ICSD settlement instructions.
- SafekeepingPlaceType/SharesHeldAtLoaclCustodian: applicable, for instance, when the account servicer is a global custodian and provides the account owner with a position reporting at global custodian's agents' level. When instructing, the fund manager would therefore mention, as a place of safekeeping, the BIC of the global custodian's agent on the market.

Absence of SafekeepingPlace means that:

- The SafekeepingPlace information is kept by the account servicer (SLA, account structure, ETC.) and should not be provided by the account owner.
- The SafekeepingPlace is the counterparty's Depository. The transaction is therefore domestic (to an NCSD) or internal to an ICSD.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

**Constraints**

- **CashClearingSystemRule**

The CashSettlementSystem codes are to be used only by agents directly involved in the settlement process, such as local settlement agents, CSDs and central banks.

- **FXStandingInstructionPresenceRule**

If HoldIndicator is present and is value TRUE (Yes), then FXStandingInstruction must not be present.

In ISO 15022, and therefore in ISO 20022, the FXStandingInstruction indicator can only be used when the transaction is instructed in a released mode.

```
On Condition
    /HoldIndicator is present
    And    /HoldIndicator/Indicator is equal to value 'true'
Following Must be True
    /FXStandingInstruction Must be absent
```

- **SettlementDetailsRule**

If SettlementDetails elements are used, then their conditions of use must be pre-agreed between account owner and account servicer.

- **SettlementParametersGuideline**

- Physical settlement:

In case of physical receipt at local agent level, the receiving agent must receive a receipt free instruction

for reconciliation purposes. If the final beneficiary of the securities uses a global custodian, the receipt free

instruction will be sent to the global custodian that will forward it to his receiving agent on the market.

For physical settlement, SettlementTransactionCondition/Physical must be used.

- Partial settlement:

This market practice only applies in markets where partial settlement is allowed.

If an account owner wants to specify in its original instruction that partial settlement is allowed or not, they

must use the PartialSettlementIndicator.

- Book Transfer:

The use of SecuritiesTransactionTypes OWNI, OWNE, INSP and PORT and other booktransfer related fields is governed by a market practice document.

- Block Trades:

The parent transaction must be identified using the BlocTrade field with code BLPA. The children transactions must be identified using the code BLCH.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

- **FXStandingInstructionPresenceRule**

If HoldIndicator is present and is value TRUE (Yes), then FXStandingInstruction must not be present. In ISO 15022,

On Condition

/HoldIndicator is present

And /HoldIndicator/Indicator is equal to value 'true'

Following Must be True

/FXStandingInstruction Must be absent

- **SettlementDetailsRule**

If SettlementDetails elements are used, then their conditions of use must be pre-agreed between account owner and account servicer.

- **SettlementParametersGuideline**

- Physical settlement:

In case of physical receipt at local agent level, the receiving agent must receive a receipt free instruction

for reconciliation purposes. If the final beneficiary of the securities uses a global custodian, the receipt free

instruction will be sent to the global custodian that will forward it to his receiving agent on the market.

For physical settlement, SettlementTransactionCondition/Physical must be used.

- Partial settlement:

This market practice only applies in markets where partial settlement is allowed.

If an account owner wants to specify in its original instruction that partial settlement is allowed or not, they

must use the PartialSettlementIndicator.

- Book Transfer:

The use of SecuritiesTransactionTypes OWNI, OWNE, INSP and PORT and other booktransfer related fields is governed by a market practice document.

- Block Trades:

The parent transaction must be identified using the Block Trade field with code BLPA. The children

transactions must be identified using the code BLCH.

For more details, see the relevant market practice document on [www.smpg.info](http://www.smpg.info).

### 35.2.2.52 InterestComputationMethod2Code

*Definition:* Specifies the method used to compute accruing interest of a financial instrument.

*Type:* CodeSet

CodeName	Name	Definition
A001	IC30360ISDAor30360AmericanBasicRule	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). This is the most commonly used 30/360 method for US straight and convertible bonds.
A002	IC30365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th).
A003	IC30Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual365Fixed	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	ActualActualICMA	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the

CodeName	Name	Definition
		year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi-interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi-interest period and the intermediate results are summed up.
A007	IC30E360orEuroBondBasismodel1	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be the 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	ActualActualISDA	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall (falling on a normal year, year) divided by 365, added to the actual number of days of the interest period that fall (falling on a leap year, year) divided by 366.
A009	Actual365LorActuActubasisRule	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	ActualActualAFB	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year subperiods counting backwards from the end of the coupon period (a year backwards from 28 Feb being 29 Feb, if it exists). The first of the subperiods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each subperiod and the intermediate results are summed up.
A011	IC30360ICMAor30360basicrule	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the

CodeName	Name	Definition
		same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 1 January 1999.
A012	IC30E2360orEurobondbasismodel2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that the 31st is assumed to be the 30th and 28 Feb of a non-leap year is assumed to be equivalent to 29 Feb when the first day of the interest period is the 29th, or to 30 Feb when the first day of the interest period is the 30th or the 31st. The 29th day of February in a leap year is assumed to be equivalent to 30 Feb when the first day of the interest period is the 30th or the 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on 30 Feb when the end of the period is the 30th or the 31st, or two days of interest in February when the end of the period is the 29th, or three days of interest in February when it is 28 Feb of a non-leap year and the end of the period is before the 29th.
A013	IC30E3360orEurobondbasismodel3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be the 30th, even if it is the last day of the maturity coupon period.
A014	Actual365NL	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
NARR	Narrative	Other method than A001-A020. See Narrative.
