# 1 Message Set Overview

## Introduction

This document describes the Target2-Securities - Administration message set. It includes the new version of the MessageDefinitions that have been added as part of the maintenance cycle 2023-2024 (See MCR #234) and approved by the Securities and the Payments Standards Evaluation Groups under the leadership of the Securities SEG on 15 February 2024.

## 1.1 List of MessageDefinitions

The following table lists all MessageDefinitions described in this book.

MessageDefinition	Definition
admi.005.001.02 ReportQueryRequestV02	<p>The ReportQueryRequest message is exchanged between system member and system transaction administrator.</p> <p>It aims at querying the latest available report data of a specific report type. A report is stored and available for query until the event occurs again report is replaced.</p>
admi.006.001.01 ResendRequestV01	<p>A system member or any parties authorised by them send a ResendRequest message to the Central System (such as the T2S platform). The purpose of this request is, that the requesting party wants to receive the "original" message once again. This might be caused through technical problems on the receiving side (message could not be received or processed or is missing in the message sequencing) or for archiving purposes.</p>
admi.007.001.01 ReceiptAcknowledgementV01	<p>The ReceiptAcknowledgement message is sent by the transaction administrator to a member of the system and vice versa. It is sent to acknowledge the receipt of one or multiple messages sent previously. The Acknowledgement message is 1) an application receipt acknowledgement and 2) conveys information about the processing of the original message(s). In case of 2) the ReceiptAcknowledgement can be used as a Generic error message, which provides information about the status (e.g. rejection, acceptance) of an instruction.</p>

## **2        admi.005.001.02 ReportQueryRequestV02**

### **2.1      MessageDefinition Functionality**

It aims at querying the latest available report data of a specific report type. A report is stored and available for query until the event occurs again report is replaced.

#### **Outline**

The ReportQueryRequestV02 MessageDefinition is composed of 3 MessageBuildingBlocks:

**A. MessageHeader**

Set of elements to identify the report query request message.

**B. ReportQueryCriteria**

Definition of the report query criteria.

**C. SupplementaryData**

Additional information that cannot be captured in the structured elements and/or any other specific block.

## 3 admi.006.001.01 ResendRequestV01

### 3.1 MessageDefinition Functionality

A system member or any parties authorised by them send a ResendRequest message to the Central System (such as the T2S platform). The purpose of this request is, that the requesting party wants to receive the "original" message once again. This might be caused through technical problems on the receiving side (message could not be received or processed or is missing in the message sequencing) or for archiving purposes.

#### Outline

The ResendRequestV01 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. MessageHeader

Set of elements to identify the resend message.

B. ResendSearchCriteria

Defines the criteria to unambiguously identify the information to be resent.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

### 3.2 Structure

## 3.3 Constraints

### C1 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

### C2 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

### C3 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

## **4        admi.007.001.01          ReceiptAcknowledgementV01**

### **4.1      MessageDefinition Functionality**

The ReceiptAcknowledgement message is sent by the transaction administrator to a member of the system and vice versa. It is sent to acknowledge the receipt of one or multiple messages sent previously. The Acknowledgement message is 1) an application receipt acknowledgement and 2) conveys information about the processing of the original message(s). In case of 2) the ReceiptAcknowledgement can be used as a Generic error message, which provides information about the status (e.g. rejection, acceptance) of an instruction.

#### **Outline**

The ReceiptAcknowledgementV01 MessageDefinition is composed of 3 MessageBuildingBlocks:
