# 1 Message Set Overview

## Introduction

This document describes the Target2-Securities message set. It includes all of the MessageDefinitions that have been developed in the scope of the Target2-Securities Business Justification and approved by the Securities and Payments SEGs, under the lead of the Securities SEG and by the Cross-SEG Harmonisation (CSH) group for the Business File Header (see BJ #42).

It aims at querying the latest available report data of a specific report type. A report is stored and available for query until the event occurs again report is replaced.

#### **Outline**

The ReportQueryRequestV02 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. **MessageHeader**

Set of elements to identify the report query request message.

B. **ReportQueryCriteria**

Definition of the report query criteria.

C. **SupplementaryData**

Additional information that cannot be captured in the structured elements and/or any other specific block.

## 3 admi.006.001.01 ResendRequestV01

### 3.1 MessageDefinition Functionality

A system member or any parties authorised by them send a ResendRequest message to the Central System (such as the T2S platform). The purpose of this request is, that the requesting party wants to receive the "original" message once again. This might be caused through technical problems on the receiving side (message could not be received or processed or is missing in the message sequencing) or for archiving purposes.

#### Outline

The ResendRequestV01 MessageDefinition is composed of 3 MessageBuildingBlocks:

- A. MessageHeader  
Set of elements to identify the resend message.
- B. ResendSearchCriteria  
Defines the criteria to unambiguously identify the information to be resent.
- C. SupplementaryData  
Additional information that cannot be captured in the structured elements and/or any other specific block.

## **BillingReportRequestV01**

### **14.1      MessageDefinition Functionality**

The BillingReportRequest message is sent by the system member to the system transaction administrator to request cumulative or itemised billing data. The billing data may be cumulative information or aggregated information on the level of a single securities or a dedicated cash account within a given period for each service item.

#### Outline

The BillingReportRequestV01 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. MessageHeader

Defines the characteristics specific to the message, such as the identification or the creation date and time.

B. SearchCriteria

Defines the criteria to be used to extract the billing data.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

# 16 camt.078.001.02 IntraBalanceMovementQueryV02

## 16.1 MessageDefinition Functionality

The IntraBalanceMovementQuery message is sent from an account owner/requestor to a settlement infrastructure to query intra-balance movement instructions, along with their current status, based on a set of search criteria.

The message may also be used to:

- re-send a message sent by the account owner to the account servicer (the sub-function of the message is "Duplicate")
- provide a third party with a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy")
- re-send to a third party a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy Duplicate").

Outline

The IntraBalanceMovementQueryV02 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. Identification

Unambiguous identification of the message as known by the account owner (or the instructing party acting on its behalf).

B. QueryDefinition

Defines the intra-balance movement instruction query criteria.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

## 16.3 Constraints

### C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

### C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

### C3 AdditionalReasonInformationRule

The AdditionalReasonInformation element must not contain information that can be provided in a structured field unless bilaterally agreed.

### C4 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

#### C5 **BalanceFromToRule**

The cash balance type of BalanceFrom must be different from the cash balance type of BalanceTo.

#### C6 **BICFI**

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

#### C7 **Country**

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

#### C8 **CurrencyAmount**

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

#### C9 **IBAN**

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

#### C10 **SupplementaryDataRule**

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

# 17 camt.079.001.02 IntraBalanceMovementQueryResponseV02

## 17.1 MessageDefinition Functionality

The IntraBalanceMovementQueryResponse message is sent from a settlement infrastructure to an account owner/requestor to provide all intra-balance movement instructions satisfying the selection criteria, as defined within the query, returning current attributes and latest status.

The message may also be used to:

- re-send a message sent by the account owner to the account servicer (the sub-function of the message is "Duplicate")
- provide a third party with a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy")
- re-send to a third party a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy Duplicate").

Outline

The IntraBalanceMovementQueryResponseV02 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. Identification

Unambiguous identification of the message as known by the account servicer or settlement infrastructure.

B. Pagination

Pagination of the message.

C. ReportGeneralDetails

General characteristics related to the report information.

D. ReportOrError

Provides information on report or error resulting from the originating query message.

## 17.3 Constraints

### C1 **ActiveCurrency**

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

### C2 **ActiveOrHistoricCurrency**

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

### C3 **ActivityIndicatorNoRule**

If ReportGeneralDetails/ActivityIndicator is equal to No (false or 0) then ReportOnError must be absent.

*This constraint is defined at the MessageDefinition level.*

### C4 **ActivityIndicatorYesRule**

If ReportGeneralDetails/ActivityIndicator is equal to Yes (true or 1) then ReportOnError must be present.

*This constraint is defined at the MessageDefinition level.*

### C5 **AdditionalReasonInformationRule**

The AdditionalReasonInformation element must not contain information that can be provided in a structured field unless bilaterally agreed.

### C6 **AnyBIC**

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

### C7 **BICFI**

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

### C8 **CashAccountOwnerRule**

CashAccountOwner must be present or Movement(\*)/AccountOwner must be present, but not both.

### C9 **CashAccountRule**

CashAccount must be present or Movement(\*)/CashAccount must be present, but not both.

### C10 **CashAccountServicerRule**

CashAccountServicer must be present or Movement(\*)/AccountOwner must be present, but not both.

---

**C11 Country**

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

**C12 CurrencyAmount**

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

**C13 IBAN**

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

**C14 IdentificationAndProxyGuideline**

If the account identification is not defined through a conventional identification such as an email address or a mobile number, then the proxy element should be used for the identification of the account.

**C15 IdentificationOrProxyPresenceRule**

Identification must be present or Proxy must be present. Both may be present.

**C16 NoAccountOwnerTransactionIdentificationRule**

If no reference is available for the AccountOwnerTransactionIdentification, for example, the transaction was sent by fax, then the AccountOwnerTransactionIdentification must be NONREF.

**C17 PendingToFailingRule**

A pending transaction (PEND) becomes a failing transaction (PENF) on the settlement date instructed in the message, during the end of day reporting.

**C18 QueryTypeFullRule**

If ReportGeneralDetails/QueryType is equal to Full, then ReportOnError/Movements(\*)/Movement/MovementDetails must be present.

*This constraint is defined at the MessageDefinition level.*

**C19 QueryTypeStatusRule**

If ReportGeneralDetails/QueryType is equal to Status, then ReportOnError/Movements(\*)/Movement/MovementDetails must be absent.

*This constraint is defined at the MessageDefinition level.*

**C20 ReportIdentificationRule**

If Long number (Exact5NumericText) is used, then the report must be a delta reports (UpdateType: DELT).

If the report has multiple pages, then the ReportIdentification must remain the same through all the pages. It is a unique number to the report.

Two reports of the same type sent one after the other to the same receiver in relation to the same safekeeping account must have different report identifications. For example, a daily report sent on day 1 would have ReportIdentification 001, on day 2, 002, etc.

#### C21 ShortLongNumberRule

ShortNumber must contain the FIN message type number of the linked message. LongNumber must contain the XML message identifier of the linked message.

#### C22 StatusAndReasonRule

StatusAndReason must be present or Movement(\*)/StatusAndReason must be present, but not both.

#### C23 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

#### C24 WithLinkageRule

If Code WITH is used, then the one or more instruction which are linked become bound and which must be executed together. Even if one single transactions/instructions/notifications can not be executed, then all the other transactions/instructions/notifications must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 transactions/instructions/notifications.

# **18 camt.080.001.02 IntraBalanceMovementModificationQueryV02**

## **18.1 MessageDefinition Functionality**

The IntraBalanceMovementModificationQuery message is sent from an account owner/requestor to a settlement infrastructure to query for the status of intra-balance movement modification instruction(s) based on a set of search criteria or business attributes.

The message may also be used to:

- re-send a message sent by the account owner to the account servicer (the sub-function of the message is "Duplicate")
- provide a third party with a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy")
- re-send to a third party a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy Duplicate").

Outline

The IntraBalanceMovementModificationQueryV02 MessageDefinition is composed of 3 MessageBuildingBlocks:

### **A. Identification**

Unambiguous identification of the message as known by the account owner (or the instructing party acting on its behalf).

### **B. QueryDefinition**

Defines the intra-balance movement modification query criteria.

### **C. SupplementaryData**

Additional information that cannot be captured in the structured elements and/or any other specific block.

# 19 camt.081.001.02 IntraBalanceMovementModificationReportV02

## 19.1 MessageDefinition Functionality

The IntraBalanceMovementModificationReport message is sent from a settlement infrastructure to an account owner/requestor to provide full details or current status values of the intra-balance movement modification request(s), as defined within the query.

The message may also be used to:

- re-send a message previously sent (the sub-function of the message is "Duplicate")
- provide a third party with a copy of a message for information (the sub-function of the message is "Copy")
- re-send to a third party a copy of a message for information (the sub-function of the message is "Copy Duplicate").

### Outline

The IntraBalanceMovementModificationReportV02 MessageDefinition is composed of 5 MessageBuildingBlocks:

#### A. Identification

Unambiguous identification of the message as known by the account servicer or settlement infrastructure.

#### B. Pagination

Pagination of the message.

#### C. ReportGeneralDetails

General characteristics related to the report information.

#### D. ReportOrError

Provides information on report or error resulting from the originating query message.

#### E. SupplementaryData

## 19.3 Constraints

### C1 **ActiveCurrency**

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

### C2 **ActiveOrHistoricCurrency**

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

### C3 **ActivityIndicatorNoRule**

If ReportGeneralDetails/ActivityIndicator is equal to No (false or 0) then ReportOrError must be absent.

*This constraint is defined at the MessageDefinition level.*

### C4 **ActivityIndicatorYesRule**

If ReportGeneralDetails/ActivityIndicator is equal to Yes (true or 1) then ReportOrError must be present.

*This constraint is defined at the MessageDefinition level.*

### C5 **AdditionalDetailsRule**

Unless bilaterally agreed between the sender and the receiver, if InstructionProcessingAdditionalDetails is present, then it must not contain information that can be provided in a structured field.

### C6 **AdditionalReasonInformationRule**

The AdditionalReasonInformation element must not contain information that can be provided in a structured field unless bilaterally agreed.

### C7 **AnyBIC**

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

### C8 **BalanceFromToRule**

The cash balance type of BalanceFrom must be different from the cash balance type of BalanceTo.

### C9 **BICFI**

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

### C10 **CashAccountOwnerRule**

CashAccountOwner must be present or Cancellation(\*)/AccountOwner must be present, but not both.

---

**C11 CashAccountRule**

CashAccount must be present or Cancellation(\*)/CashAccount must be present, but not both.

**C12 CashAccountServicerRule**

CashAccountServicer must be present or Cancellation(\*)/AccountOwner must be present, but not both.

**C13 Country**

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

**C14 CurrencyAmount**

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

**C15 IBAN**

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

**C16 IdentificationAndProxyGuideline**

If the account identification is not defined through a conventional identification such as an email address or a mobile number, then the proxy element should be used for the identification of the account.

**C17 IdentificationOrProxyPresenceRule**

Identification must be present or Proxy must be present. Both may be present.

**C18 ModificationRequestPresenceRule**

At least one modification request type element must be present.

**C19 OtherProcessingRule**

If OtherProcessing is used, then its usage must be pre-agreed between the sender and the receiver.

**C20 ProcessingStatusRule**

ProcessingStatus must be present or Cancellation(\*)/ProcessingStatus must be present, but not both.

**C21 QueryTypeFullRule**

If ReportGeneralDetails/QueryType is equal to Full, then ReportOrError/Modifications(\*)/Modification/UnderlyingIntraBalance must be present.

*This constraint is defined at the MessageDefinition level.*

**C22 QueryTypeStatusRule**

If ReportGeneralDetails/QueryType is equal to Status, then ReportOrError/Modifications(\*)/Modification/UnderlyingIntraBalance must be absent.

*This constraint is defined at the MessageDefinition level.*

### C23 ReportNumberRule

If Long number (Exact5NumericTest) is used, then the report must be a delta reports (UpdateType: DELT).

If the report has multiple pages, then the ReportNumber must remain the same through all the pages. It is a unique number to the report.

Two reports of the same type sent one after the other to the same receiver in relation to the same safekeeping account must have different ReportNumbers. For example, a daily report sent on day 1 would have ReportNumber 001, on day 2, 002, etc.

### C24 ShortLongNumberRule

ShortNumber must contain the FIN message type number of the linked message. LongNumber must contain the XML message identifier of the linked message.

### C25 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

### C26 WithLinkageRule

If Code WITH is used, then the one or more instruction which are linked become bound and which must be executed together. Even if one single transactions/instructions/notifications can not be executed, then all the other transactions/instructions/notifications must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 transactions/instructions/notifications.

# **IntraBalanceMovementCancellationQueryV02**

### **20.1    MessageDefinition Functionality**

The IntraBalanceMovementCancellationQuery message is sent from an account owner/requestor to a settlement infrastructure to query for the status of intra-balance movement cancellation instruction(s) based on a set of search criteria or business attributes.

The message may also be used to:

- re-send a message sent by the account owner to the account servicer (the sub-function of the message is "Duplicate")
- provide a third party with a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy")
- re-send to a third party a copy of a message being sent by the account owner for information (the sub-function of the message is "Copy Duplicate").

Outline

The IntraBalanceMovementCancellationQueryV02 MessageDefinition is composed of 3 MessageBuildingBlocks:

#### **A. Identification**

Unambiguous identification of the message as known by the account owner (or the instructing party acting on its behalf).

#### **B. QueryDefinition**

Defines the intra-balance movement cancellation query criteria.

#### **C. SupplementaryData**

Additional information that cannot be captured in the structured elements and/or any other specific block.

### C4 ActivityIndicatorYesRule

If ReportGeneralDetails/ActivityIndicator is equal to Yes (true or 1) then ReportOrError must be present.

*This constraint is defined at the MessageDefinition level.*

### C5 AdditionalDetailsRule

Unless bilaterally agreed between the sender and the receiver, if InstructionProcessingAdditionalDetails is present, then it must not contain information that can be provided in a structured field.

### C6 AdditionalReasonInformationRule

The AdditionalReasonInformation element must not contain information that can be provided in a structured field unless bilaterally agreed.

---

**C7 AnyBIC**

## 22.3 Constraints

### C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

### C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

### C3 ActivityIndicatorNoRule

If ActivityIndicator is equal to No (false or 0) then SubBalances must be absent.

*This constraint is defined at the MessageDefinition level.*

### C4 ActivityIndicatorYesRule

If ActivityIndicator is equal to Yes (true or 1) then SubBalances must be present.

*This constraint is defined at the MessageDefinition level.*

### C5 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

---

**C6 BICFI**

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

**C7 Country**

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

**C8 CurrencyAmount**

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

**C9 IBAN**

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

**C10 IdentificationAndProxyGuideline**

If the account identification is not defined through a conventional identification such as an email address or a mobile number, then the proxy element should be used for the identification of the account.

**C11 IdentificationOrProxyPresenceRule**

Identification must be present or Proxy must be present. Both may be present.

**C12 NoAccountOwnerTransactionIdentificationRule**

If no reference is available for the AccountOwnerTransactionIdentification, for example, the transaction was sent by fax, then the AccountOwnerTransactionIdentification must be NONREF.

**C13 ReportNumberRule**

If Long number (Exact5NumericTest) is used, then the report must be a delta reports (UpdateType: DELT).

If the report has multiple pages, then the ReportNumber must remain the same through all the pages. It is a unique number to the report.

Two reports of the same type sent one after the other to the same receiver in relation to the same safekeeping account must have different ReportNumbers. For example, a daily report sent on day 1 would have ReportNumber 001, on day 2, 002, etc.

**C14 ShortLongNumberRule**

ShortNumber must contain the FIN message type number of the linked message. LongNumber must contain the XML message identifier of the linked message.

**C15 SupplementaryDataRule**

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

**C16 WithLinkageRule**

If Code WITH is used, then the one or more instruction which are linked become bound and which must be executed together. Even if one single transactions/instructions/notifications can

not be executed, then all the other transactions/instructions/notifications must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 transactions/instructions/notifications.

## 23.3 Constraints

### C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

### C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

### C3 ActivityIndicatorNoRule

If ReportGeneralDetails/ActivityIndicator is equal to No (false or 0) then Movements must be absent.

*This constraint is defined at the MessageDefinition level.*

### C4 ActivityIndicatorYesRule

If ReportGeneralDetails/ActivityIndicator is equal to Yes (true or 1) then Movements must be present.

*This constraint is defined at the MessageDefinition level.*

### C5 AdditionalReasonInformationRule

The AdditionalReasonInformation element must not contain information that can be provided in a structured field unless bilaterally agreed.

### C6 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

---

**C7 BICFI**

Valid BICs for financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consist of eight (8) or eleven (11) contiguous characters.

**C8 Country**

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

**C9 CurrencyAmount**

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

**C10 IBAN**

A valid IBAN consists of all three of the following components: Country Code, check digits and BBAN.

**C11 IdentificationAndProxyGuideline**

If the account identification is not defined through a conventional identification such as an email address or a mobile number, then the proxy element should be used for the identification of the account.

**C12 IdentificationOrProxyPresenceRule**

Identification must be present or Proxy must be present. Both may be present.

**C13 NoAccountOwnerTransactionIdentificationRule**

If no reference is available for the AccountOwnerTransactionIdentification, for example, the transaction was sent by fax, then the AccountOwnerTransactionIdentification must be NONREF.

**C14 PendingToFailingRule**

A pending transaction (PEND) becomes a failing transaction (PENF) on the settlement date instructed in the message, during the end of day reporting.

**C15 ReportNumberRule**

If Long number (Exact5NumericTest) is used, then the report must be a delta reports (UpdateType: DELT).

If the report has multiple pages, then the ReportNumber must remain the same through all the pages. It is a unique number to the report.

Two reports of the same type sent one after the other to the same receiver in relation to the same safekeeping account must have different ReportNumbers. For example, a daily report sent on day 1 would have ReportNumber 001, on day 2, 002, etc.

**C16 ShortLongNumberRule**

ShortNumber must contain the FIN message type number of the linked message. LongNumber must contain the XML message identifier of the linked message.

**C17 StatusAndReasonRule**

StatusAndReason must be present or Movement(\*)/StatusAndReason must be present, but not both.

## C18 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

## C19 WithLinkageRule

If Code WITH is used, then the one or more instruction which are linked become bound and which must be executed together. Even if one single transactions/instructions/notifications can not be executed, then all the other transactions/instructions/notifications must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 transactions/instructions/notifications.

#### Outline

The CollateralValueQueryV02 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. MessageHeader

Set of elements to identify the collateral value query message.

B. CollateralValueQueryDefinition

Definition of the collateral query.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

## 26 head.002.001.01 BusinessFileHeaderV01

### 26.1 MessageDefinition Functionality

The Business File Header contains information about the parties involved in the file exchange, as well as information about the content and its structure.

The Business File headers has four major functions:

- Provides information about the sender of the file.
- Identifies the file exchanged: each file must have a unique File Identifier.
- Describes the type of message(s) exchanged: by default, the type of messages contained in a file will be ISO 20022 message definitions.
- Provides processing information to the receiving party: that would be, for instance, the total number of messages included in the file.

Usage: The Business File Header (head.002) is to be used exclusively in existing implementations, such as the Eurosystem, and will be replaced for general use by the upcoming next version defined as the Business File Envelope (nvlp.002). The Business File Header (head.002) will therefore not be maintained in the future and any new implementation must use the Business File Envelope (nvlp.002).

#### Outline

The BusinessFileHeaderV01 MessageDefinition is composed of 2 MessageBuildingBlocks:

#### A. PayloadDescription

Contains information about the payload.

#### B. Payload

File Payload is used to include the exchanged documents within the file structure.

## 26.3 Constraints

### C1 OnlySignatureElement

The XML Signature namespace ("http://www.w3.org/2000/09/xmldsig#") allows for different XML elements to be root elements. This means the user has to choose amongst these global elements which one to use as the root element. Only the XML element Signature is allowed.

## **27      reda.006.001.01 SecurityCreationRequestV01**

### **27.1    MessageDefinition Functionality**

#### **SCOPE**

An instructing party sends a SecurityCreationRequest message to an executing/servicing party to request the creation of financial instrument static details in their system.

The instructing party - executing/servicing party relationship may be:

- Central Securities Depositories (CSD) who would like to publish security static data, or
- a Corporate, or
- a Bank, or
- a Market Infrastructure, or
- a Market Data Provider.

#### **USAGE**

The request is sent when the instructing party identified a gap in the securities coverage of the executing/servicing party. The instructing party needs this security to be set-up at the executing / servicing party to perform its activities.

Initiator: instructing party.

#### **Outline**

The SecurityCreationRequestV01 MessageDefinition is composed of 3 MessageBuildingBlocks:

**A. MessageHeader**

Common business identification for the message.

**B. Security**

Represents the financial instruments details.

**C. SupplementaryData**

Additional information that cannot be captured in the structured elements and/or any other specific block.

**C8 ISINGuideline**

When an ISIN code exists, it is strongly recommended that the ISIN be used.

**C9 ISINPresenceRule**

If ISIN is not present then either Description or at least one occurrence of OtherIdentification must be present.

**C10 MailingIndicatorRule**

If RegistrationAddressIndicator is "true" or "1" (Yes), then MailingIndicator must be "true" or "1".

**C11 NextCallableDateAndCallableIndicatorRule**

If CallableIndicator is present, then NextCalldate must be present.

**C12 OtherIdentificationPresenceRule**

If OtherIdentification is not present then either ISIN or Description must be present.

**C13 PutableDateAndPutableIndicatorRule**

If PutableIndicator is present, then PutableDate must be present.

**C14 SupplementaryDataRule**

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.
