These are not investments in their own right but are tax exempt 'wrappers' in which equities, bonds and funds can be held to shelter them from various types of tax.

In the UK, a typical tax wrapper product is known as an 'ISA' (Individual Savings Account).

RedemptionBulkOrderV05

41.1 **MessageDefinition Functionality**

Scope

The RedemptionBulkOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct a redemption from a financial instrument for two or more accounts.

Usage

The RedemptionBulkOrder message is used to bulk several individual orders into one bulk order. The individual orders come from different instructing parties, that is, account owners, but are for the same financial instrument. The RedemptionBulkOrder can result in one single bulk cash settlement or several individual cash settlements.

This message will be typically used by a party collecting orders, that is, a concentrator, bulking these individual orders into one bulk order before sending it to an executing party.

For a single redemption order, the RedemptionOrder message, not the RedemptionBulkOrder message, must be used.

If there are redemption orders for different financial instruments but for the same account, then the RedemptionOrder must be used.

Outline

The RedemptionBulkOrderV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. BulkOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

42 setr.002.001.05 RedemptionBulkOrderCancellationRequestV05

42.1 MessageDefinition Functionality

Scope

The RedemptionBulkOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent RedemptionBulkOrder.

Usage

The RedemptionBulkOrderCancellationRequest message is used to request the cancellation of one or more individual orders.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of one or more individual orders, the order reference of each individual order listed in the original RedemptionBulkOrder message is specified in the order reference element. The message identification of the RedemptionBulkOrder message which contains the individual orders to be cancelled may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a RedemptionBulkOrderCancellationRequest is made using an OrderCancellationStatusReport message.

Outline

The RedemptionBulkOrderCancellationRequestV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. MasterReference

Reference assigned to a set of orders or trades in order to link them together.

E. OrderReferences

Identification of the individual order to be cancelled.

F. CopyDetails

Information provided when the message is a copy of a previous message.

43 setr.003.001.05 RedemptionBulkOrderConfirmationV05

43.1 MessageDefinition Functionality

Scope

The RedemptionBulkOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of execution for a previously received RedemptionBulkOrder message.

Usage

The RedemptionBulkOrderConfirmation message is used to confirm the execution of all individual orders included in a previously sent RedemptionBulkOrder message.

There is usually one bulk confirmation message for one bulk order message.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the RedemptionBulkOrder message in which the individual order was conveyed may also be quoted in RelatedReference, but this is not recommended.

A RedemptionBulkOrder must in all cases be responded to by a RedemptionBulkOrderConfirmation and in no circumstances by a RedemptionOrderConfirmation.

If the executing party needs to confirm a RedemptionOrder instruction, then the RedemptionOrderConfirmation must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

Outline

The RedemptionBulkOrderConfirmationV05 MessageDefinition is composed of 7 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

D. RelatedReference

E. BulkExecutionDetails

General information related to the execution of the orders.

F. CopyDetails

Information provided when the message is a copy of a previous message.

G. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

RedemptionOrderV05

44.1 MessageDefinition Functionality

Scope

The RedemptionOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct the redemption of one or more financial instruments for one investment fund account.

Usage

The RedemptionOrder message is used to instruct single redemption orders, that is, a message containing one order for one financial instrument and related to one investment account. The RedemptionOrder message may also be used for multiple orders, that is, a message containing several orders related to the same investment account for different financial instruments.

For a single redemption order, the RedemptionOrder message, not the RedemptionBulkOrder message, must be used.

If there are redemption orders for the same financial instrument but for different accounts that are to be communicated in a single message, then the RedemptionBulkOrder message must be used.

Outline

The RedemptionOrderV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. MultipleOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

The RedemptionOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent RedemptionOrder.

Usage

The RedemptionOrderCancellationRequest message is used to request the cancellation of one or more individual orders.

There is no amendment, but a cancellation and re-instruct policy.

The message identification of the RedemptionOrder message which contains the individual orders to be cancelled may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a RedemptionOrderCancellationRequest is made using an OrderCancellationStatusReport message.

46 setr.006.001.06 RedemptionOrderConfirmationV06

46.1 MessageDefinition Functionality

Scope

The RedemptionOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of execution for a previously received RedemptionOrder message.

Usage

The RedemptionOrderConfirmation message is used to confirm the execution of one or more individual orders.

A RedemptionOrder message containing more than one individual order may be responded to by more than one RedemptionOrderConfirmation message, as the valuation cycle of the financial instruments in each individual order may be different. When a RedemptionOrderConfirmation message contains fewer confirmations than originally instructed in the original RedemptionOrder message, there is no specification indication in the confirmation for this. Reconciliation must be based on the references.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the RedemptionOrder message in which the individual order was conveyed may also be quoted in RelatedReference but this is not recommended.

A RedemptionOrder must in all cases be responded to by a RedemptionOrderConfirmation message and in no circumstances by a RedemptionBulkOrderConfirmation message.

If the executing party needs to confirm one or more redemption orders for the same financial instrument then a RedemptionBulkOrderConfirmation message must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

Outline

The RedemptionOrderConfirmationV06 MessageDefinition is composed of 7 MessageBuildingBlocks:

A. MessageIdentification

F. CopyDetails

SubscriptionBulkOrderV05

47.1 MessageDefinition Functionality

Scope

The SubscriptionBulkOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct a subscription to a financial instrument for two or more accounts.

Usage

The SubscriptionBulkOrder message is used to bulk several individual orders into one bulk order. The individual orders come from different instructing parties, that is, account owners, but are for the same financial instrument. This message will typically be used by a party collecting orders and bulking these individual orders into one bulk order before sending it to another party.

For a single subscription order, the SubscriptionOrder message, not the SubscriptionBulkOrder message, must be used.

Outline

The SubscriptionBulkOrderV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. BulkOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.
