2 **acmt.001.001.08 AccountOpeningInstructionV08**

2.1 **MessageDefinition Functionality**

Scope

The AccountOpeningInstruction message is sent by an account owner, for example, an investor or its designated agent to the account servicer, for example, a registrar, transfer agent, custodian or securities depository, to instruct the opening of an account or the opening of an account and the establishment of an investment plan.

Usage

The AccountOpeningInstruction is used to open an account directly or indirectly with the account servicer or an intermediary.

In some markets, for example, Australia, and for some products in the United Kingdom, a first order (also known as a deposit instruction) is placed at the same time as the account opening. To cater for this scenario, an order message can be linked (via references in the message) to the AccountOpeningInstruction message when needed.

Execution of the AccountOpeningInstruction is confirmed via an AccountDetailsConfirmation message.

FundEstimatedCashForecastReportV04

7.1 **MessageDefinition Functionality**

Scope

A report provider, such as a transfer agent, sends the FundEstimatedCashForecastReport message to the report user, such as an investment manager or pricing agent, to report the estimated cash incomings and outgoings of one or more share classes of an investment fund on one or more trade dates.

The cash movements may result from, for example, redemption, subscription, switch transactions or reinvestment of dividends.

Usage

The FundEstimatedCashForecastReport is used to report estimated cash movements, that is, it is sent prior to the cut-off time and/or the price valuation of the fund.

The message contains incoming and outgoing cash flows that are estimated, that is, the price has not been applied. If the price is definitive, then the FundConfirmedCashForecastReport message must be used.

The message structure allows for the following uses:

- to provide cash in and cash out amounts for a fund/sub fund (FundOrSubFundDetails sequence is used),
- to provide cash in and cash out amounts for a fund/sub fund and one or more share classes (a FundOrSubFundDetails sequence and one or more EstimatedFundCashForecastDetails sequences are used),
- to provide cash in and cash out amounts for one or more share classes (one or more EstimatedFundCashForecastDetails sequences are used).
- to provide cash in and cash out amounts for more than one fund/sub fund, and more than one share classes (two or more FundOrSubFundDetails sequences and two or more EstimatedFundCashForecastDetails sequences and used); however, it should be noted that, in this usage, there is no way to determine which share class belongs to which fund/sub fund from the message content itself, which may not be desirable and the use of this kind of combination should be bilaterally agreed.

This message allows the report provider to report estimated cash movements in or out of a fund, but does not allow the Sender to categorise these movements, for example by country, or to give details of the underlying orders, commission or charges. If the report provider wishes to give detailed information related to estimated cash movements, then the FundDetailedEstimatedCashForecastReport message must be used.

FundConfirmedCashForecastReportV04

8.1 **MessageDefinition Functionality**

Scope

A report provider, such as a transfer agent, sends the FundConfirmedCashForecastReport message to the report user, such as an investment manager or pricing agent, to report the confirmed cash incomings and outgoings of one or more share classes of an investment fund on one or more trade dates.

The cash movements may result from, for example, redemption, subscription, switch transactions or reinvestment of dividends.

Usage

The FundConfirmedCashForecastReport is used to report definitive cash movements, that is it is sent after the cut-off time and/or the price valuation of the fund.

This message contains incoming and outgoing cash flows that are confirmed, that is, the price has been applied. If the price is not yet definitive, then the FundEstimatedCashForecastReport message must be used.

The message structure allows for the following uses:

- to provide cash in and cash out amounts for a fund/sub fund (a FundOrSubFundDetails sequence is used),
- to provide cash in and cash out amounts for a fund/sub fund and one or more share classes (FundOrSubFundDetails sequence and one or more FundCashForecastDetails sequences are used),
- to provide cash in and cash out amounts for one or more share classes (one or more FundCashForecastDetails sequences are used).
- to provide cash in and cash out amounts for more than one fund/sub fund, and more than one share classes (two or more FundOrSubFundDetails sequences and two or more FundCashForecastDetails sequences are used); however, it should be noted that, in this usage, there is no way to determine which share class belongs to which fund/sub fund from the message content itself, which may not be desirable and the use of this kind of combination should be bilaterally agreed.

This message allows the report provider to report cash movements in or out of a fund, but does not allow the Sender to categorise these movements, for example by country, or to give details of the underlying orders, commission or charges.

If the report provider wishes to give detailed information related to cash movements, then the FundDetailedConfirmedCashForecastReport message must be used.

FundDetailedEstimatedCashForecastReportV04

9.1 **MessageDefinition Functionality**

Scope

A report provider, such as a transfer agent, sends the FundDetailedEstimatedCashForecastReport message to the report user, such as an investment manager or pricing agent, to report the estimated cash incomings and outgoings, sorted by country, institution name or other criteria defined by the user of one or more share classes of an investment fund on one or more trade dates.

The cash movements may result from, for example, redemption, subscription, switch transactions or reinvestment of dividends.

Usage

The FundDetailedEstimatedCashForecastReport is used to provide estimated cash movements, that is, it is sent prior to the cut-off time and/or the price valuation of the fund. The message contains incoming and outgoing cash flows that are estimated, that is, the price has not been applied. If the price is definitive, then the FundDetailedConfirmedCashForecastReport message must be used.

The message structure allows for the following uses:

- to provide cash in and cash out amounts for a fund/sub fund and one or more share classes (a FundOrSubFundDetails sequence and one or more EstimatedFundCashForecastDetails sequences are used),
- to provide cash in and cash out amounts for one or more share classes (one or more EstimatedFundCashForecastDetails sequences are used).

If the report is to provide estimated cash in and cash out for a fund/sub fund only and not for one or more share classes, then the FundEstimatedCashForecastReport message must be used.

The FundDetailedEstimatedCashForecastReport message is used to report cash movements in or out of a fund, organised by party, such as fund management company, country, currency or by some other criteria defined by the report provider. If the report is used to give the cash-in and cash-out for a party, then additional criteria, such as currency and country, can be specified.

In addition, the underlying transaction type for the cash-in or cash-out movement can be specified, as well as information about the cash movement's underlying orders, such as commission and charges.

SCOPE

A report provider, for example, a transfer agent, fund accountant or market data provider, sends the PriceReport message to the report recipient, for example, a fund management company, transfer agent, market data provider, regulator or any other interested party to provide the net asset value and price information for financial instruments on specific trade dates and, optionally, to quote price variation information.

- inform another party that the quotation of a financial instrument is suspended,
- report prices that are used for other purposes than the execution of investment funds orders.

PriceReportCancellationV05

14.1 **MessageDefinition Functionality**

SCOPE

A report provider, for example, a transfer agent, fund accountant or market data provider, sends the PriceReportCancellation message to the report recipient, for example, a fund management company, transfer agent, market data provider, regulator or any other interested party to cancel previously sent prices.

USAGE

The PriceReportCancellation message is used to either:

- cancel an entire PriceReport that was previously sent (by quoting the business reference of the original price report in the PriceReportIdentification element), or,
- cancel one or more individual prices from a previously sent price report (by using the PriceDetailsToBeCancelled sequence).

Technically, it is possible to cancel all the prices individually by using the PriceDetailsToBeCancelled sequence, but this is not recommended.

The cancellation should not contain the cancellation of prices for more than one NAV date.

Outline

The PriceReportCancellationV05 MessageDefinition is composed of 11 MessageBuildingBlocks:

- A. MessageIdentification
Reference that uniquely identifies a message from a business application standpoint.
- B. PoolReference
Collective reference identifying a set of messages.
- C. PreviousReference
Reference to a linked message that was previously sent.
- D. MessagePagination
Pagination of the message.
- E. PriceReportIdentification
Unique and unambiguous identifier for the price report, as assigned by the reporting party.
- F. CancellationIdentification
Unique and unambiguous identifier for the cancellation of the previous price report, as assigned by the reporting party.
- G. CancellationReason

Reason for the cancellation.

H. ExpectedPriceCorrectionDate

Date or date and time the price will be corrected.

I. CompletePriceCancellation

Indicates whether or not all the prices of the referenced price report are cancelled.

J. CancelledPriceValuationDetails

Details of prices to be cancelled.

K. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

FundReferenceDataReportV07

15.1 **MessageDefinition Functionality**

Scope

The FundReferenceDataReport message is sent by a report provider, for example, a fund promoter, fund management company, transfer agent, or market data provider to the report recipient, for example, a professional investor, investment fund distributor, market data provider, regulator or other interested party, to provide the key reference data for financial instruments to facilitate trading. The message may also include reporting data concerning product governance, such as target market data, and a breakdown of the costs and fees.

Usage

A FundReferenceDataReport message should be prepared for each class of unit/share (for which an individual ISIN should have been allocated), in respect of its "home" market. Each time the fund data changes, the 'product provider' must provide the data to a product user, for example, the distributors, by sending a new funds reference data report. A single message may contain more than one report. When the FundReferenceDataReport message is sent to provide updated reference data, the message overwrites the previously sent data.

The FundReferenceDataReport message may be used in various models or environments:

- in a standalone environment, for example, initiated by the Report Provider (fund promoter, fund manager and / or reference data vendors) sent on a regular frequency, or when changes are needed.
- in a request / response environment, with the InvestmentFundReportRequest, for example, initiated by report users (data vendors, professional investors, regulators or investment fund distributors) in enabling the user to control the flow and updates of information.
- in a reference data vendor environment, for example, market infrastructure and reference data providers may collate and store all fund reference data information centrally for access via database or regular distribution information. A reference data vendor may assume the role of both report provider and report user.

The FundReferenceDataReport message may be used to provide data concerning product governance, such as target market data, and a breakdown of the costs and fees in the context of MiFID II, with respect to the European MiFID Template (EMT).

Outline

The FundReferenceDataReportV07 MessageDefinition is composed of 5 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PreviousReference

Reference to a linked message that was previously sent.

C. RelatedReference

Reference to a linked message that was previously received.

D. FundReferenceDataReportIdentification

Unique and unambiguous identifier for the fund reference data report, as assigned by the issuer of the report.

E. Report

Fund reference data.

SecuritiesMessageRejectionV03

17.1 **MessageDefinition Functionality**

Scope

An account servicer, for example, a registrar, transfer agent or custodian bank, sends the SecuritiesMessageRejection message to the account owner, for example, an investor or its authorised agent, to reject a previously received message on which action cannot be taken.

The message may also be sent by an executing party, for example, transfer agent to the instructing party, for example, investment manager or its authorised representative to reject a previously received message on which action cannot be taken.

Usage

The SecuritiesMessageRejection message is used for the following reasons:

- the executing party does not recognise the linked reference, so the executing party cannot process the message
- the instructing party should not have sent the message.

Reasons that a receiver does not expect a message include no SLA in place between the Sender and the Receiver.

The SecuritiesMessageRejection message must not be used to reject an instruction message that cannot be processed for business reasons, for example, if information is missing in an instruction message or because securities are not available for settlement.

Outline

The SecuritiesMessageRejectionV03 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies a message from a business application standpoint.

B. RelatedReference

Reference to a linked message that was previously received.

C. Reason

Reason to reject the message.

CustodyStatementOfHoldingsV02

18.1 **MessageDefinition Functionality**

Scope

An account servicer, for example, a transfer agent sends the CustodyStatementOfHoldings message to the account owner, for example, a fund manager or an account owner's designated agent to provide detailed holdings of the portfolio at a specified moment in time.

The message provides, at a moment in time, the quantity and identification of the financial instruments that the account servicer holds for the account owner. The message can also include availability and the location of holdings to facilitate trading and minimise settlement issues.

The message reports all information per financial instrument, ie, when a financial instrument is held at multiple places of safekeeping, the total holdings for all locations can be provided.

Usage

The CustodyStatementOfHoldings message is used to provide detailed quantity and availability information for financial instrument holdings of a portfolio. The message should be sent at a frequency agreed bi-laterally between the account servicer and the account owner.

This message can be also be used to report where the financial instruments are safe-kept, physically or notionally. If a security is held in more than one safekeeping place, this can also be indicated.

This message can reflect all outstanding holding information or may only contain changes since the previously sent statement.

The CustodyStatementOfHoldings message can only be used to list the holdings of a single (master) account. However, it is possible to break down these holdings into one or several sub-accounts. Therefore, this message can be used to either specify holdings at

- the main account level, or,
- the sub-account level.

Outline

The CustodyStatementOfHoldingsV02 MessageDefinition is composed of 10 MessageBuildingBlocks:

I. TotalValues

Value of total holdings reported.

J. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

AccountingStatementOfHoldingsV02

19.1 **MessageDefinition Functionality**

Scope

An account servicer, for example, a transfer agent sends the AccountingStatementOfHoldings message to the account owner, for example, a fund manager or an account owner's designated agent to provide detailed holdings of the portfolio at a specified moment in time.

The message provides, at a moment in time, valuations of the portfolio together with details of each financial instrument holding.

The message can be sent either audited or un-audited and may be provided on a trade date or settlement date basis.

Usage

The AccountingStatementOfHoldings message is used to provide valuation detail for each financial instrument held in a portfolio. The message should be sent at a frequency agreed bi-laterally between the account servicer and the account owner.

This message can only be used to list the holdings of a single (master) account. However, it is possible to break down these holdings into one or several sub-accounts. Therefore, the message can be used to either specify holdings at

- the main account level, or,
- the sub-account level.

This message can be used to report where the financial instruments are safe-kept, physically or notionally. If a security is held in more than one safekeeping place, this can also be indicated.

The AccountingStatementOfHoldings message should not be used for trading purposes.

Outline

The AccountingStatementOfHoldingsV02 MessageDefinition is composed of 10 MessageBuildingBlocks:

TransferOutCancellationRequestV09

25.1 **MessageDefinition Functionality**

Scope

The TransferOutCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent transfer out instruction.

Usage

The TransferOutCancellationRequest message is used to request the cancellation of one or more transfer out instructions.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of one or more transfer out instructions, the transfer reference of the transfer, as specified in the original TransferOutInstruction message, is specified in the transfer reference element.

The message identification of the original TransferOutInstruction message may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a TransferOutCancellationRequest is made using a TransferCancellationStatusReport message.

Outline

The TransferOutCancellationRequestV09 MessageDefinition is composed of 8 MessageBuildingBlocks:

A. MessageIdentification

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

TransferInCancellationRequestV09

29.1 **MessageDefinition Functionality**

Scope

The TransferInCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent transfer in instruction.

Usage

The TransferInCancellationRequest message is used to request the cancellation of one or more transfer in instructions.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of one or more transfer in instructions, the transfer reference of the transfer, as specified in the original TransferInInstruction message, is specified in the transfer reference element.

The message identification of the original TransferOutInstruction message may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a TransferInCancellationRequest is made using a TransferCancellationStatusReport message.

Outline

The TransferInCancellationRequestV09 MessageDefinition is composed of 9 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. MasterReference

F. Function

Function of the transfer-in, that is, whether the message is used as a request to cancel a previously sent instruction or as a cancellation of a previously sent advice and request for information. The absence of Function indicates the message is a request to cancel a previously sent instruction.

G. TransferReferences

Reference of the transfer to be cancelled.

H. MarketPracticeVersion

Identifies the market practice to which the message conforms.

I. CopyDetails

Information provided when the message is a copy of a previous message.

31 sese.008.001.09 ReversalOfTransferInConfirmationV09

31.1 MessageDefinition Functionality

Scope

The ReversalOfTransferInConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to cancel a previously sent transfer in confirmation.

Usage

The ReversalOfTransferInConfirmation message is used to reverse a previously sent transfer in confirmation.

To request the reversal of a transfer in confirmation, the transfer reference of the transfer in instruction, as specified in the original TransferInInstruction message, is specified in the transfer reference element. The executing party's reference for the execution of the transfer may also be specified in the TransferConfirmationReference element.

The message identification of the original TransferInConfirmation message may also be quoted in PreviousReference but this is not recommended.

Outline

The ReversalOfTransferInConfirmationV09 MessageDefinition is composed of 9 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. MasterReference

Unique and unambiguous identifier for a group of individual transfers as assigned by the instructing party. This identifier links the individual transfers together.

F. Function

Function of the transfer-in, that is, whether the message is used as a reversal of a previously sent confirmation or as a reversal of a previously sent advice. The absence of Function indicates the message is a reversal of a previously sent confirmation.

G. ReversalReferences

Reference of the transfer confirmation to be reversed.

H. MarketPracticeVersion

Identifies the market practice to which the message conforms.

I. CopyDetails

Information provided when the message is a copy of a previous message.

RequestForTransferStatusReportV09

32.1 **MessageDefinition Functionality**

Scope

The RequestForTransferStatusReport is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent to request the status of a previously instructed transfer.

The RequestForTransferStatusReport may also be sent by any party in the transfer transaction to another party in the transfer transaction chain to request information relevant for the settlement of a transfer transaction.

Usage

The RequestForTransferStatusReport is used to request either:

- the status of one or several information requests or transfer instructions or,
- the status of one or several transfer cancellation instructions, or
- information relevant to one or more transfer instructions.

Outline

The RequestForTransferStatusReportV09 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. RequestDetails

Information to identify the transfer for which the status is requested.

C. MarketPracticeVersion

Identifies the market practice to which the message conforms.

D. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

32.3 Constraints

C1 **ActiveCurrency**

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

C2 **AnyBIC**

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C3 **Country**

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C4 **ExtensionRule**

This component may not be used without the explicit approval of the Registration Authority and without strict usage rules published by the Registration Authority.

C5 **HoldingTransferCurrencyGuideline**

When cash is transferred in a currency other than that of the cash, the currency should be specified in TransferCurrency.

C6 **IdentificationGuideline**

When an ISIN code exists, it is strongly recommended that the ISIN be used.

C7 **OtherReferenceRule**

Reference/OtherReference should be used to reference a transfer instruction or a transfer cancellation request 'message' sent in a proprietary way or used for a system reference. If Reference/OtherReference is present, Reference/OtherReference/MessageName must contain 'fax' or 'phone' or 'email', etc.

C8 **PreviousReferenceRule**

If Reference/PreviousReference/MessageName is present, it must start with sese.001, sese.002, sese.005, sese.006, sese.012 or sese.014.

35 sese.012.001.12 PortfolioTransferInstructionV12

35.1 MessageDefinition Functionality

Scope

The PortfolioTransferInstruction message is sent by an instructing party, for example, a (new) plan manager (transferee), to the executing party, for example, a (old) plan manager (transferor), on behalf of the initiating party, for example, an investor (client), to instruct the transfer of financial instruments from the client's account at the old plan manager (transferor) to the clients account at the new plan manager (transferee).

Usage

The PortfolioTransferInstruction message is used to instruct one or more portfolio transfers for one client. Each portfolio transfer is for delivery to the same account. The account may be owned by one or more individual investors or one or more corporate investors.

If the instructing party does not have enough information to instruct the portfolio transfer, then it must first send an AccountHoldingInformationRequest message to the executing party in order to receive an AccountHoldingInformation message.

36.1 MessageDefinition Functionality

Scope

The PortfolioTransferConfirmation message is sent by an executing party, for example, a (old) plan manager (transferor), to the instructing party for example, a (new) plan manager (transferee), to confirm the transfer of financial instruments from the client's account at the old plan manager (transferor) to the clients account at the new plan manager (transferee).

Usage

The PortfolioTransferConfirmation message is used to confirm one or more portfolio transfers for one client.

The reference of each portfolio transfer confirmation is identified in TransferConfirmationIdentification. 37 sese.014.001.09 PortfolioTransferCancellationRequestV09

37.1 MessageDefinition Functionality

Scope

The PortfolioTransferCancellationRequest message is sent by, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent PortfolioTransferInstruction message.

Usage

The PortfolioTransferCancellationRequest message is used to request the cancellation of a portfolio transfer instruction.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of a portfolio transfer instruction, the transfer reference of the portfolio transfer, as specified in the original PortfolioTransferInstruction message, is specified in the transfer reference element.

The message identification of the original PortfolioTransferInstruction message may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a PortfolioTransferCancellationRequest is made using an TransferCancellationStatusReport message.
