48 setr.008.001.05 SubscriptionBulkOrderCancellationRequestV05

48.1 MessageDefinition Functionality

Scope

The SubscriptionBulkOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent SubscriptionBulkOrder.

Usage

The SubscriptionBulkOrderCancellationRequest message is used to request the cancellation of one or more individual orders.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of one or more individual orders, the order reference of each individual order listed in the original SubscriptionBulkOrder message is specified in the order reference element. The message identification of the SubscriptionBulkOrder message which contains the individual orders to be cancelled may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a SubscriptionBulkOrderCancellationRequest is made using an OrderCancellationStatusReport message.

Outline

The SubscriptionBulkOrderCancellationRequestV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

D. MasterReference

SubscriptionBulkOrderConfirmationV05

49.1 **MessageDefinition Functionality**

Scope

The SubscriptionBulkOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of the execution of a SubscriptionBulkOrder instruction.

Usage

The SubscriptionBulkOrderConfirmation message is used to confirm the execution of all individual orders.

There is usually one bulk confirmation message for one bulk order message.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the SubscriptionBulkOrder message in which the individual order was conveyed may also be quoted in RelatedReference.

A SubscriptionBulkOrder must in all cases be responded to by a SubscriptionBulkOrderConfirmation and in no circumstances by a SubscriptionOrderConfirmation.

If the executing party needs to confirm a SubscriptionOrder instruction, then the SubscriptionOrderConfirmation must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

Outline

The SubscriptionBulkOrderConfirmationV05 MessageDefinition is composed of 7 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

E. BulkExecutionDetails

General information related to the execution of the orders.

F. CopyDetails

Information provided when the message is a copy of a previous message.

G. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

SubscriptionOrderV05

50.1 **MessageDefinition Functionality**

Scope

The SubscriptionOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct the subscription of one or more financial instruments for one investment fund account.

Usage

The SubscriptionOrder message is used to instruct single subscription orders, that is, a message containing one order for one financial instrument for one investment account. The SubscriptionOrder message may also be used for multiple orders, that is, a message containing several orders for the same investment account for different financial instruments.

For a single subscription order, the SubscriptionOrder message, not the SubscriptionBulkOrder message, must be used.

If there are subscription orders for the same financial instrument but for different accounts that are to be communicated in a single message, then the SubscriptionBulkOrder message must be used.

Outline

The SubscriptionOrderV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. MultipleOrderDetails

General information related to the orders.

E. CopyDetails

Information provided when the message is a copy of a previous message.

F. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

SubscriptionOrderCancellationRequestV05

51.1 **MessageDefinition Functionality**

Scope

The SubscriptionOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent SubscriptionOrder.

Usage

The SubscriptionOrderCancellationRequest message is used to request the cancellation of one or more individual orders.

There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of one or more individual orders, the order reference of each individual order listed in the original SubscriptionOrder message is specified in the order reference element. The message identification of the SubscriptionOrder message which contains the individual orders to be cancelled may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation.

The rejection or acceptance of a SubscriptionOrderCancellationRequest is made using an OrderCancellationStatusReport message.

Outline

The SubscriptionOrderCancellationRequestV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. MasterReference

Reference assigned to a set of orders or trades in order to link them together.

E. OrderReferences

Identification of the individual order to be cancelled.

F. CopyDetails

Information provided when the message is a copy of a previous message.

SubscriptionOrderConfirmationV06

52.1 **MessageDefinition Functionality**

Scope

The SubscriptionOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of the execution of a SubscriptionOrder instruction.

Usage

The SubscriptionOrderConfirmation message is used to confirm the execution of one or more individual orders.

A SubscriptionOrder message containing more than one individual order may be responded to by more than one SubscriptionOrderConfirmation message, as the valuation cycle of the financial instruments in each individual order may be different. When a SubscriptionOrderConfirmation message contains fewer confirmations than originally instructed in the original SubscriptionOrder message, there is no specification indication in the confirmation for this. Reconciliation must be based on the references.

Each individual order confirmation specified is identified in DealReference. The reference of the original individual order is specified in OrderReference. The message identification of the SubscriptionOrder message in which the individual orders was conveyed may also be quoted in RelatedReference but this is not recommended.

A SubscriptionOrder must in all cases be responded to by a SubscriptionOrderConfirmation message and in no circumstances by a SubscriptionBulkOrderConfirmation message.

If the executing party needs to confirm one or more subscription orders for the same financial instrument, then a SubscriptionBulkOrderConfirmation message must be used.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.

Outline

The SubscriptionOrderConfirmationV06 MessageDefinition is composed of 7 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. MultipleExecutionDetails

General information related to the execution of the orders.

F. CopyDetails

Information provided when the message is a copy of a previous message.

G. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

53 setr.013.001.05 SwitchOrderV05

53.1 MessageDefinition Functionality

Scope

The SwitchOrder message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to instruct a switch transaction from a financial instrument or multiple financial instruments to a different specified financial instrument or instruments for a specified amount/quantity.

Usage

The SwitchOrder message is used to either:

- instruct one switch transaction comprising one or more redemption legs and one or more subscription legs, that is, a single switch transaction that can be a one to one, many to one, many to many or one to many switch transaction, or,
- instruct one or many switch transactions each comprising one redemption leg and one subscription leg, that is, multiple simple switch transactions.

The SwitchOrder message may be used to either:

- instruct a switch transaction for one investment account, or,
- instruct a switch transaction for separate accounts at the redemption and subscription leg levels.

The message caters for a switch from one financial instrument to another financial instrument (within the same fund family), many to one, many to many and one to many.

The message caters for switch transactions that result in an additional cash payment from the investor or a transaction that results in a net payment to the investor. Not all institutions or funds permit this type of switch and acceptance is therefore not automatic.

There is no limitation on the number of switch legs in a switch message. The number allowed is defined by the fund prospectus or by the service level agreement (SLA) in place between the two parties. However, if the SwitchOrderDetails sequence is present more than once, then the RedemptionLegDetails and SubscriptionLegDetails sequences may only be present once.

If SwitchOrderDetails\InvestmentAccount is used, then the InvestmentAccountDetails sequences in SubscriptionLegDetails and RedemptionLegDetails are not allowed. This functionality is to be used by institutions that set up two accounts per investor, rather than one investment account.

There is no switch driver type in the message to indicate whether the switch is buy or sell driven. A driver is not needed since it is possible to indicate the total subscription amount or the total redemption amount. Only one of these two amounts should be used.

The subscription quantity can be expressed in one of the following ways:

- Amount: the monetary value (either GROSS or NET) of the financial instrument to be subscribed to, for example, the subscription of EUR 1,000 of financial instrument ISIN LU1234567890 or

- Unit: the number of units of the financial instrument to be subscribed to, for example, the subscription of 10 units of financial instrument ISIN LU1234567890 or
- Percentage of the total redemption amount: when the switch transaction is redemption driven, it is the part of the redemption amount that must be switched to a specific financial instrument, for example, the subscription quantity of financial instrument ISIN LU1234567890 represents 50% of the redemption amount of the financial instrument ISIN LU4444444444.

The redemption quantity can be expressed in one of the following ways:

- Amount: the monetary value (either GROSS or NET) of the financial instrument to be redeemed, for example, the redemption of EUR 1,000 of financial instrument ISIN LU1234567890, or
- Unit: the number of units of financial instrument to be redeemed, for example, the redemption of 10 units of financial instrument ISIN LU1234567890, or
- Rate: the part of the portfolio to be redeemed, for example, the redemption of 10% of the holdings in financial instrument ISIN LU1234567890, or
- Percentage of the total subscription amount: when the switch transaction is subscription driven, it is the part of the subscription amount that must be the result of the redemption of a specific financial instrument, for example, the redemption quantity in financial instrument ABC represents 50% of the subscription amount of the financial instrument ISIN LU4444444444.

54 setr.014.001.05 SwitchOrderCancellationRequestV05

54.1 MessageDefinition Functionality

Scope

The SwitchOrderCancellationRequest message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to request the cancellation of a previously sent SwitchOrder instruction.

Usage

The SwitchOrderCancellationRequest is used to cancel the entire previously sent SwitchOrder instruction/s and all the individual legs that it contains. There is no amendment, but a cancellation and re-instruct policy.

To request the cancellation of a switch order, the order reference of the original switch order is quoted in the order reference element. The message identification of the SwitchOrder message may also be quoted in PreviousReference but this is not recommended.

The deadline and acceptance of a cancellation request is subject to a service level agreement (SLA). This cancellation message is a cancellation request. There is no automatic acceptance of the cancellation request.

The rejection or acceptance of a SwitchOrderCancellationRequest is made using an OrderCancellationStatusReport message.

Outline

The SwitchOrderCancellationRequestV05 MessageDefinition is composed of 6 MessageBuildingBlocks:

- A. MessageIdentification
Reference that uniquely identifies the message from a business application standpoint.
- B. PoolReference
Collective reference identifying a set of messages.
- C. PreviousReference
Reference to a linked message that was previously sent.
- D. MasterReference
Reference assigned to a set of orders or trades in order to link them together.
- E. OrderReferences
Identification of the individual order to be cancelled.
- F. CopyDetails
Information provided when the message is a copy of a previous message.

	CopyDetails <CpyDtls>	[0..1]	±		3801

54.3 Constraints

C1 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C2 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C3 SwitchRule

The cancellation of a switch order must be a full cancellation. Partial cancellations are not allowed, for example, the cancellation of a given leg.

This constraint is defined at the MessageDefinition level.

55 setr.015.001.05 SwitchOrderConfirmationV05

55.1 MessageDefinition Functionality

Scope

The SwitchOrderConfirmation message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to confirm the details of the execution of a previously received SwitchOrder instruction.

Usage

The reference of the original switch order is specified in OrderReference. The message identification of the SwitchOrder message in which the switch order was conveyed may also be quoted in RelatedReference but this is not recommended.

When the message is used to convey a confirmation amendment/s, the AmendmentIndicator must be present with the value 'true' or '1'. When this is the case, the message must only contain a confirmation amendment/s and not contain both a confirmation amendment/s and a 'new' confirmation/s.
