56.1 **MessageDefinition Functionality**

Scope

The OrderInstructionStatusReport message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to report the status of an order from the time the executing party receives the order until the time the order is executed.

Usage

The OrderInstructionStatusReport message is used to report on the status of a subscription, redemption or a switch order.

The OrderInstructionStatusReport message may be used to give the status of:

- one order message by using OrderDetailsReport or,
- one or more individual order instructions by using IndividualOrderDetailsReport, or
- one or more switch orders by using SwitchOrderDetailsReport.

If the OrderInstructionStatusReport message is used to report the status of an individual order, then IndividualOrderDetailsReport is used and the order reference of the individual order is quoted in OrderReference. The message identification of the message in which the individual order was conveyed may also be quoted in RelatedReference but this is not recommended.

If the OrderInstructionStatusReport message is used to report the status of a switch order, then SwitchOrderDetailsReport is used and the order reference of the switch order is quoted in OrderReference. The message identification of the message in which the switch order was conveyed may also be quoted in RelatedReference but this is not recommended.

If the OrderInstructionStatusReport message is used to report the status of an entire order message, for example, the SubscriptionBulkOrder, or a SubscriptionOrder containing several orders, then OrderDetailsReport is used and the message identification of the order message is quoted in RelatedReference. All the orders within the message must have the same status.

One of the following statuses can be reported:

- an accepted status, or,
- an already executed status, or,
- a sent to next party status, or,
- a received status, or,
- a settled status, or,
- a communication problem with next party status, or,

- a confirmation amendment status, or,
- a done for the day status, or,
- a partially done status, or,
- an open status, or,
- a cancelled status, or
- a conditionally accepted status, or,
- a rejected status, or,
- a suspended status, or,
- a partially settled status, or,
- an in-repair status (only for an individual or switch order).

For a switch order, the OrderInstructionStatusReport message provides the status of the whole switch order, that is, it is not possible to accept one leg and to reject the other leg: the entire switch order has to be rejected. In order to identify the legs within the switch that are causing the problem, the leg is identified in either the RedemptionLegIdentification or SubscriptionLegIdentification elements.

When the OrderInstructionStatusReport is used to give the status of an individual or a switch order, the following can be specified:

- repaired conditions (for a switch, this is at the level of a leg),
- information related to the order, for example, settlement amount, number of units, expected trade date.

Outline

The OrderInstructionStatusReportV05 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. Reference

Reference to the message or communication that was previously received.

C. StatusReport

Status of the order.

D. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

56.3 Constraints

C1 ActiveCurrency

The currency code must be a valid active currency code, not yet withdrawn on the day the message containing the currency is exchanged. Valid active currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and are not yet withdrawn on the day the message containing the Currency is exchanged.

C2 ActiveOrHistoricCurrency

The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3)

contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.

C3 AdditionalInformationRule

The AdditionalInformation element must not contain information that can be provided in a structured field unless bilaterally agreed.

C4 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C5 CancelledElementRule

Either Reason or AdditionalInformation must be present. Both may be present.

C6 CommercialAgreementRule

If CommercialAgreementReference is present, then NewCommercialAgreementReferenceIndicator must be present too.

C7 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C8 CurrencyAmount

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

C9 CurrencyAmount

The number of fractional digits (or minor unit of currency) must comply with ISO 4217.

Note: The decimal separator is a dot.

C10 DateElementRule

Either ExpectedTradeDateTime or ExpectedCashSettlementDate must be present. Both may be present.

C11 ExtensionRule

This component may not be used without the explicit approval of the Registration Authority and without strict usage rules published by the Registration Authority.

C12 FeeElementRule

One of the elements (Type, RepairedStandardAmount, RepairedStandardRate, RepairedDiscountAmount, RepairedDiscountRate, RepairedRequestedAmount, RepairedRequestedRate, CommercialAgreementReference, NewCommercialAgreementReferenceIndicator) must be present.

C13 IdentificationGuideline

It is recommended that ISIN is used in Identification.

When an ISIN code exists, it is strongly recommended that the ISIN be used.

C14 MessageNameAndReferenceGuideline

If Reference/RelatedReference/MessageName or Reference/OtherReference/MessageName is present, it must contain 502 or must start with setr.001, setr.004, setr.007, setr.010, setr.013, setr.019 or setr.018 and Reference/RelatedReference/Reference must contain the message reference of a message in this list.

This constraint is defined at the MessageDefinition level.

C15 OrderDataElementRule

One of the elements (InvestmentAccountDetails, FinancialInstrumentDetails, UnitsNumber, NetAmount, GrossAmount, HoldingsRedemptionRate, SettlementAmount, UnitCurrency, QuotedCurrency) must be present.

C16 OrderOriginatorEligibility2Rule

OrderOriginatorEligibility may only be present if one or more of the parties identified in OwnerIdentification is/are the originator of the order.

C19 SeriesElementRule

Either SeriesDate or SeriesName must be present. Both may be present.

C20 SwitchOrderDataElementRule

One of the elements (SettlementAmount, SettlementMethod, AdditionalAmount, UnitCurrency, QuotedCurrency) must be present.

OrderCancellationStatusReportV05

57.1 MessageDefinition Functionality

Scope

The OrderCancellationStatusReport message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to report the status of an order cancellation request that was previously received.

Usage

The OrderCancellationStatusReport message is used to provide the status of:

- one or more individual order cancellation requests by using IndividualCancellationStatusReport, or,
- an order cancellation request message by using CancellationStatusReport.

If the OrderCancellationStatusReport message is used to report the status of an individual order cancellation request, then the repetitive IndividualCancellationStatusReport sequence is used and the order reference of the individual order is quoted in OrderReference. The message identification of the message in which the individual order was conveyed may also be quoted in RelatedReference but this is not recommended.

If the OrderCancellationStatusReport message is used to report the status of an entire order cancellation request message, for example, the SubscriptionBulkOrderCancellationRequest, or a SubscriptionOrderCancellationRequest containing several orders, then the CancellationStatusReport sequence is used. The message identification of the order cancellation request message may also be quoted in RelatedReference but this is not recommended. All the order cancellation requests within the message must have the same status.

One of the following statuses can be reported:

- the order cancellation is pending, or,
- the order cancellation request is rejected, or,
- the order is cancelled.

When the cancellation is rejected, the reason for the rejection must be specified.

Outline

The OrderCancellationStatusReportV05 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. Reference

Reference to the message or communication that was previously received.

C. StatusReport

Status of the order cancellation.

D. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

57.3 Constraints

C1 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C2 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C3 ExtensionRule

This component may not be used without the explicit approval of the Registration Authority and without strict usage rules published by the Registration Authority.

C4 IdentificationGuideline

It is recommended that ISIN is used in Identification.

When an ISIN code exists, it is strongly recommended that the ISIN be used.

C5 MessageNameAndReferenceGuideline

If Reference/RelatedReference/MessageName or Reference/OtherReference/MessageName is present, it must contain 502 or must start with setr.002, setr.005, setr.008, setr.011, setr.014 or setr.018 and Reference/RelatedReference/Reference must contain the message reference of a message in this list.

This constraint is defined at the MessageDefinition level.

C6 OrderOriginatorEligibility2Rule

OrderOriginatorEligibility may only be present if one or more of the parties identified in OwnerIdentification is/are the originator of the order.

C7 OtherReferenceGuideline

OtherReference should be used to reference an order cancellation 'message' sent in a proprietary way or used for a system reference. If OtherReference is present, OtherReference/MessageName must contain 'fax' or 'phone' or 'email', etc.

This constraint is defined at the MessageDefinition level.

C8 ReasonElementRule

Either Reason or AdditionalInformation must be present. Both may be present.

C9 SeriesElementRule

Either SeriesDate or SeriesName must be present. Both may be present.

C3 ExtensionRule

This component may not be used without the explicit approval of the Registration Authority and without strict usage rules published by the Registration Authority.

C4 IdentificationGuideline

It is recommended that ISIN is used in Identification.

When an ISIN code exists, it is strongly recommended that the ISIN be used.

C5 OrderOriginatorEligibility2Rule

OrderOriginatorEligibility may only be present if one or more of the parties identified in OwnerIdentification is/are the originator of the order.

C6 OtherReferenceGuideline

RequestDetails/Reference/OtherReference should be used to reference an order instruction or cancellation 'message' sent in a proprietary way or used for a system reference. If RequestDetails/Reference/OtherReference is present, RequestDetails/Reference/OtherReference/MessageName must contain 'fax' or 'phone' or 'email', etc.

This constraint is defined at the MessageDefinition level.

C7 PreviousReferenceGuideline

59 setr.047.001.03 SubscriptionOrderConfirmationCancellationInstructionV03

59.1 MessageDefinition Functionality

Scope

The SubscriptionOrderConfirmationCancellationInstruction message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to cancel a previously sent SubscriptionOrderConfirmation.

Usage

To request the cancellation of one or more individual order executions, the order reference and deal reference of each individual order execution in the original SubscriptionOrderConfirmation are specified in the order reference and deal reference elements respectively. The message identification of the SubscriptionOrderConfirmation message in which the individual order execution was conveyed may also be quoted in PreviousReference but this is not recommended. The AmendmentIndicator is used to specify whether the subscription order confirmation cancellation is to be followed by an amendment. An amendment of a subscription order confirmation is carried out by sending a SubscriptionOrderConfirmation message in which the AmendmentIndicator contains the value 'true'.

Outline

The SubscriptionOrderConfirmationCancellationInstructionV03 MessageDefinition is composed of 8 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. AmendmentIndicator

Indicates whether a confirmation amendment message will follow the confirmation cancellation instruction or not.

F. MasterReference

Reference assigned to a set of orders or trades in order to link them together.

G. OrderReferences

Identification of the individual order confirmation to be cancelled.

H. CopyDetails

61 setr.051.001.03 RedemptionOrderConfirmationCancellationInstructionV03

61.1 MessageDefinition Functionality

Scope

The RedemptionOrderConfirmationCancellationInstruction message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to cancel a previously sent RedemptionOrderConfirmation.

Usage

To request the cancellation of one or more individual order executions, the order reference and deal reference of each individual order execution in the original RedemptionOrderConfirmation are specified in the order reference and deal reference elements respectively. The message identification of the RedemptionOrderConfirmation message in which the individual order execution was conveyed may also be quoted in PreviousReference but this is not recommended. The AmendmentIndicator is used to specify whether the redemption order confirmation cancellation is to be followed by an amendment. An amendment of a redemption order confirmation is carried out by sending a RedemptionOrderConfirmation message in which the AmendmentIndicator contains the value 'true'.

Outline

The RedemptionOrderConfirmationCancellationInstructionV03 MessageDefinition is composed of 8 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. PoolReference

Collective reference identifying a set of messages.

C. PreviousReference

Reference to a linked message that was previously sent.

D. RelatedReference

Reference to a linked message that was previously received.

E. AmendmentIndicator

Indicates whether a confirmation amendment message will follow the confirmation cancellation instruction or not.

F. MasterReference

Reference assigned to a set of orders or trades in order to link them together.

G. OrderReferences

Identification of the individual order confirmation to be cancelled.

H. CopyDetails

Information provided when the message is a copy of a previous message.

64 setr.057.001.03 OrderConfirmationStatusReportV03

64.1 MessageDefinition Functionality

Scope

The OrderConfirmationStatusReport message is sent by an instructing party, for example, an investment manager or its authorised representative, to the executing party, for example, a transfer agent, to report the status of an order confirmation or an order confirmation amendment.

Usage

The OrderConfirmationStatusReport message is used to report on the status of one or more individual:

- subscription confirmations,
- subscription confirmation amendments,
- redemption confirmations,
- redemption confirmation amendments,
- switch order confirmations,
- switch order confirmation amendments.

One of the following statuses can be reported:

- confirmation rejected, or,
- amendment rejected, or,
- sent to next party, or,
- communication problem with next party, or,
- confirmation accepted, or,
- confirmation received.

It is likely that the OrderConfirmationStatusReport is only sent by the order instructing party to the order executing party to reject an order confirmation or to reject an order confirmation amendment, although if an intermediary party is used, the statuses sent to next party and communication problem with next party are also likely be used. The statuses confirmation accepted and confirmation received would only be used in the event the order executing party sends a RequestForOrderConfirmationStatusReport message and one of the other statuses does not apply.

If the status being reported is either confirmation rejected or amendment rejected, then a reason for the rejection must be given.

The individual order confirmation or confirmation amendment for which the status is given is identified with its order reference. The message identification of the message in which the individual order

confirmation or confirmation amendment was conveyed may also be quoted in RelatedReference, but this is not recommended.

Outline

The OrderConfirmationStatusReportV03 MessageDefinition is composed of 4 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. Reference

Reference to the message or communication that was previously received.

C. IndividualOrderConfirmationDetailsReport

Status report details of an individual order confirmation.

D. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

RequestForOrderConfirmationStatusReportV03

65.1 MessageDefinition Functionality

Scope

The RequestForOrderConfirmationStatusReport message is sent by an executing party, for example, a transfer agent, to the instructing party, for example, an investment manager or its authorised representative, to request the status of one or more order confirmations.

Usage

The RequestForOrderConfirmationStatusReport message is used to request the status of either:

- one or several individual order confirmations, or,
- one or several order confirmation messages.

The response to a RequestForOrderConfirmationStatusReport message is the OrderConfirmationStatusReport message.

When the RequestForOrderConfirmationStatusReport message is used to request the status of several individual order confirmations or one or more order confirmation messages, the executing party may receive several OrderConfirmationStatusReport messages from the instructing party.

When the RequestForOrderConfirmationStatusReport is used to request the status of one or more individual order confirmations, each individual order confirmation is identified with its order reference. The message identification of the message in which the individual order confirmation was conveyed may also be quoted in PreviousReference.

When the RequestForOrderConfirmationStatusReport is used to request the status of an order confirmation message, then the message identification of the order confirmation message is identified in PreviousReference.

Outline

The RequestForOrderConfirmationStatusReportV03 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. MessageIdentification

Reference that uniquely identifies the message from a business application standpoint.

B. RequestDetails

Information to identify the order confirmation for which the status is requested.

C. Extension

Additional information that cannot be captured in the structured elements and/or any other specific block.

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C2 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C3 ExtensionRule

This component may not be used without the explicit approval of the Registration Authority and without strict usage rules published by the Registration Authority.

C4 IdentificationGuideline

It is recommended that ISIN is used in Identification.

When an ISIN code exists, it is strongly recommended that the ISIN be used.

C5 OrderOriginatorEligibility2Rule

OrderOriginatorEligibility may only be present if one or more of the parties identified in OwnerIdentification is/are the originator of the order.

C6 OtherReferenceGuideline

RequestDetails/Reference/OtherReference should be used to reference an order instruction or cancellation 'message' sent in a proprietary way or used for a system reference. If RequestDetails/Reference/OtherReference is present, RequestDetails/Reference/OtherReference/MessageName must contain 'fax' or 'phone' or 'email', etc.

This constraint is defined at the MessageDefinition level.

C7 PreviousReferenceGuideline

If RequestDetails/Reference/PreviousReference/MessageName is present, it must contain 502 or must start with setr.047, setr.049, setr.051, setr.053, or setr.055 and RequestDetails/Reference/PreviousReference/Reference must contain the reference of a message in this list.

This constraint is defined at the MessageDefinition level.

C8 ReferenceElementRule

One of the elements (Reference, RelatedReference, OrderReference) must be present.

C9 SeriesElementRule

Either SeriesDate or SeriesName must be present. Both may be present.

(For an Entity that is a legal person, the term "Controlling Persons" means the natural person(s) who exercises control over the Entity. "Control" over an Entity is generally exercised by the natural person(s) who ultimately has a controlling ownership interest in the Entity. A "control ownership interest" depends on the ownership structure of the legal person and is usually identified on the basis of a threshold applying a risk-based approach (e.g. any person(s) owning more than a certain percentage of the legal person, such as 25%). Where no natural person(s) exercises control through ownership interests, the Controlling Person(s) of the Entity will be the natural person(s) who exercises control of the Entity through other means. Where no natural person(s) is identified as exercising control of the Entity, the Controlling Person(s) of the Entity will be the natural person(s) who holds the position of senior managing official.).

(For an Entity that is a legal person, the term "Controlling Persons" means the natural person(s) who exercises control over the Entity. "Control" over an Entity is generally exercised by the natural person(s) who ultimately has a controlling ownership interest in the Entity. A "control ownership interest" depends on the ownership structure of the legal person and is usually identified on the basis of a threshold applying a risk-based approach (e.g. any person(s) owning more than a certain percentage of the legal person, such as 25%). Where no natural person(s) exercises control through ownership interests, the Controlling Person(s) of the Entity will be the natural person(s) who exercises control of the Entity through other means. Where no natural person(s) is identified as exercising control of the Entity, the Controlling Person(s) of the Entity will be the natural person(s) who holds the position of senior managing official.).
