EIPPCreditorEnrolmentStatusReportV01

5.1 MessageDefinition Functionality

The EIPPCreditorEnrolmentStatusReport message is sent from the EIPP (E-Invoice Presentment and Payment) directory provider to the creditor EIPP provider and optionally from the creditor EIPP provider to the creditor or any of the forwarding agent to provide the status of the initial creation, amendment or cancellation request.

Outline

The EIPPCreditorEnrolmentStatusReportV01 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. Header

Set of characteristics to identify the message and parties playing a role in the mandate acceptance, but which are not part of the mandate.

B. OriginalEnrolmentAndStatus

Status of the creditor enrolment instruction (that is request, amendment or cancellation).

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

This constraint is defined at the MessageDefinition level.

C4 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

EIPPDebtorActivationCancellationRequestV01

8.1 MessageDefinition Functionality

The EIPPDebtorActivationCancellationRequest message is sent by the debtor EIPP (E-Invoice Presentment and Payment) provider to the creditor EIPP provider and optionally from the debtor to its EIPP provider and from the creditor EIPP provider to the creditor to request for the cancellation of the debtor activation of the EIPP service with that specific creditor.

Outline

The EIPPDebtorActivationCancellationRequestV01 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. Header

Set of characteristics to identify the message and parties playing a role in the cancellation of the mandate, but which are not part of the mandate.

B. CancellationData

Provides details on the debtor activation cancellation request.

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

8.3 Constraints

C1 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C2 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C3 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C4 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.

9 DRAFT1reda.073.001.01 EIPPDebtorActivationStatusReportV01

9.1 MessageDefinition Functionality

The EIPPDebtorActivationStatusReport message is sent from the recipient of the debtor activation request message (initiation, amendment or cancellation), such as the creditor EIPP provider or the creditor, to the initiator of the debtor activation request message (debtor, debtor EIPP provider or any of the forwarding agent) to provide the status of the request.

Outline

The EIPPDebtorActivationStatusReportV01 MessageDefinition is composed of 3 MessageBuildingBlocks:

A. Header

Set of characteristics to identify the message and parties playing a role in the mandate acceptance, but which are not part of the mandate.

B. OriginalActivationAndStatus

Status of the debtor activation instruction (that is request, amendment or cancellation).

C. SupplementaryData

Additional information that cannot be captured in the structured elements and/or any other specific block.

9.3 Constraints

C1 AnyBIC

Only a valid Business identifier code is allowed. Business identifier codes for financial or non-financial institutions are registered and published by the ISO 9362 Registration Authority in the ISO directory of BICs, and consists of eight (8) or eleven (11) contiguous characters.

C2 Country

The code is checked against the list of country names obtained from the United Nations (ISO 3166, Alpha-2 code).

C3 OriginalActivationPresenceRule

When Status/Code is "Accepted" then OriginalEnrolment must be present.

C4 SupplementaryDataRule

The SupplementaryData building block at message level must not be used to provide additional information about a transaction. The SupplementaryData element at transaction level should be used for that purpose.

This constraint is defined at the MessageDefinition level.

C5 SupplementaryDataRule

This component may not be used without the explicit approval of a SEG and submission to the RA of ISO 20022 compliant structure(s) to be used in the Envelope element.
